

ABOUT US

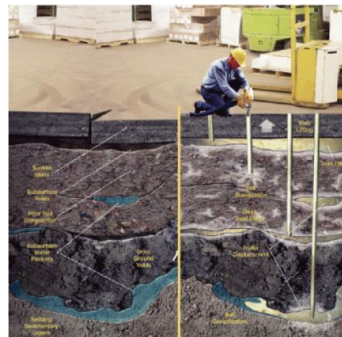

Ground Works Solutions (GWS) is a complete trenchless solutions company that has innovated the sewer rehabilitation and foundation stabilization markets. We have developed a suite of applications that minimizes the downtime and the cost of repair of our customers' current systems when compared to conventional reconstruction/replacement methods.

No-Excavation Solutions

GWS offers the most innovative solutions for trenchless rehabilitation of structural foundations and storm and sanitary sewer systems. We are a provider of the URETEK polymer injection applications and the CentriPipe sewer lining solutions. **The URETEK polymer injection applications** are the industry's fastest and most effective soil stabilization and densification solutions for foundation leveling or sewer encapsulation and sealing. **The CentriPipe centrifugally cast cementitious lining system** provides customers with the ability to repair and renew their manholes and lateral lines with a new concrete pipe that is trenchlessly cast within the old pipe. **The Inversa sewer condition assessment system** utilizes the Industry's first mobile CAT scan technology to provide managers with a detailed plan for maintaining their systems

Our Customers

- Commercial
- Industrial
- Geotechnical Engineers
- Local, State and Federal Government
- Residential

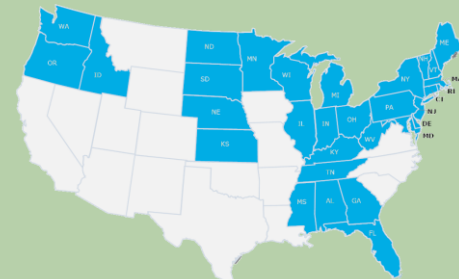

Services

- Foundation Stabilization and Lifting
- Soil Densification, Stabilization and Voidfill
- Storm and Sanitary Sewer Rehabilitation, Sealing and Lining
- Manhole, Joint and Lateral Line Encapsulation and Sealing
- Inflow and Infiltration Mitigation
- Seepage Mitigation and Subsurface Barrier Walls
- Sewer Structural Condition Assessments
