

# Constellation for Incident Management

Gain full domain awareness, and make decisions with confidence

## Monitor, report, alert and respond to incidents from a single unified environment

Be fully prepared to manage any crisis by having a dynamic, prioritized picture of emerging threats, scheduled events and ongoing incidents, fused with precise geo-location data on critical assets. Constellation for Incident Management has all the actionable intelligence you need, whenever and wherever you need it.

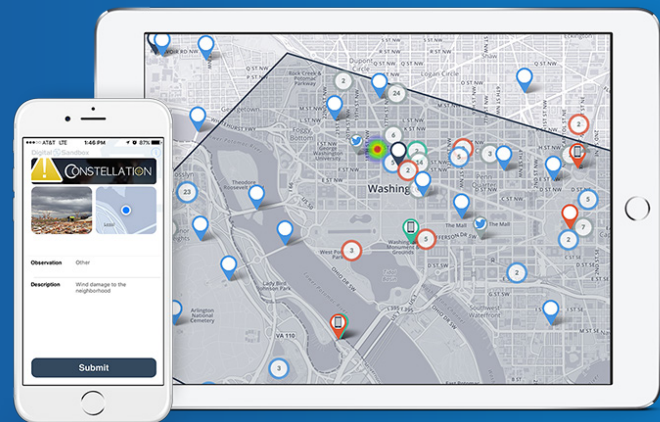

## Dynamic monitoring and analysis of the entire at-risk environment

Constellation for Incident Management does the gathering and correlating for you -- merging new data like social media posts and incident reports with your existing emergency dispatch, video and other sensor feeds. Risk-based analytics prioritize your threats in advance, and rapid alerts and status reports can be generated from multiple sources. The result is continuously updated contextual situational awareness across your entire area of responsibility.

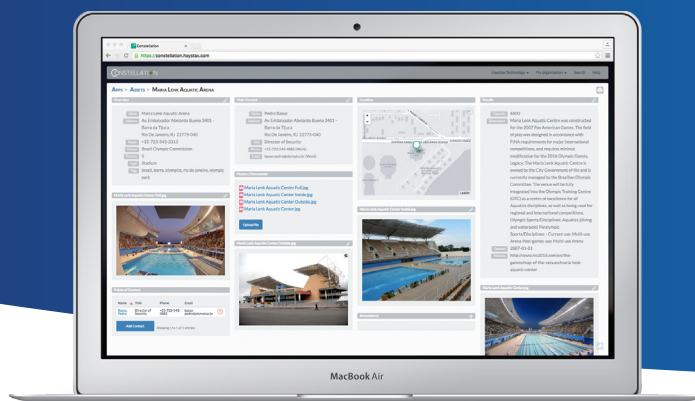

## Boundary-less incident management

Mobile Constellation provides full functionality along the chain of command, enabling rapid reporting from the field and instant notification and alerting to commanders. From any screen, not just in the command center but also on mobile devices, users can see custom views of their entire AOR or just one small area. Two-way intelligence sharing allows for more well-informed responses, and built-in blue-force tracking of agency staff and vehicles means decision-makers can properly align resources to each incident or scheduled event.

## Unified view of critical assets

See all of your key facilities, vehicles, people and systems on one screen with the Constellation Assets app. Manage floor plans, emergency plans, photos and key contact information and share the latest data with all authorized users across jurisdictions. Conduct pre-crisis safety audits, post-damage assessments or any other custom field audits with our Assessments app, and generate automated reports on your key findings.

## Customer Success Stories

Constellation for Incident Management is trusted by top state and local agencies

In states like California, Texas and Florida, and cities like Boston and Indianapolis, leading public safety agencies rely on Haystax web and mobile applications to help them manage routine operations, incidents, large-scale events and emerging digital threats. For example, the California Common Operating Picture (Cal COP) is a unified data-sharing environment linking eight agencies in the state. The Florida Department of Education uses Constellation to

help protect its 6,000-plus schools. Multiple large metropolitan areas in Texas use our system for emergency management, incident responses, critical infrastructure protection and much more. And Haystax has supported event security monitoring at half a dozen Super Bowls, the Republican National Convention and numerous other nationally significant events.

### Constellation for Incident Management Benefits:

**Domain awareness:**

See all security data in context, on a map or in a timeline

**Risk analytics:**

Detect and prioritize the biggest threats instantly

**Data-rich:**

Thousands of pre-integrated data sources and streams

**Cloud-based:**

Can deploy on demand in under one hour
