(2.17 x 3.74 x 1.08")

Overview

The OSPREY is an extremely small and rugged embedded computer. It has been engineered and tested to meet the Military and Medical industries' needs for smaller, lighter, and lower power embedded systems while adhering to stringent regulatory standards. Slightly larger in size than a credit card and one inch thick, the Osprey is a member of the VersaLogic family of the industry's smallest, lightest, ultra-rugged embedded x86 computers. This embedded computer, equipped with an Intel Atom E38xx "Bay Trail" processor, is designed to withstand extreme temperature, impact, and vibration. Advanced features include USB 3.0, dual Mini PCIe sockets, and DisplayPort++ video outputs.

Available in single-, dual-, and quad-core versions, the Osprey provides extreme performance for its size, moderate power consumption (6 to 7W typical), and a very compact package. The Osprey provides compatibility with a broad range of standard x86 application development tools for reduced development time.

The integrated Intel Gen-7 graphics core provides hardware-accelerated MPEG-4/H.264 and MPEG-2 video encoding and decoding. A DisplayPort++ and standard LVDS video outputs; both outputs support multiple display modes including Extended Desktop and Clone. An optional adapter converts the LVDS output to VGA.

Overview *...continued*

Industry-standard system interfaces include Gigabit Ethernet with network boot capability, four USB 2.0 ports, and two serial ports. A SATA 3 Gb/s interface supports high-capacity storage. On-board eMMC Flash, a microSD socket and a Mini PCIe socket with mSATA support provide flexible solid-state drive (SSD) options. The Mini PCIe socket also accommodates plug-in A/D, Wi-Fi modems, GPS receivers, MIL-STD-1553, Ethernet, Firewire, and other mini cards.

Designed and tested for industrial temperature (-40° to +85°C) operation, the rugged Osprey also meets MIL-STD-202G specifications for shock and vibration. Soldered-on RAM and latching SATA, Ethernet, power, and main I/O connectors provide additional ruggedization for use in extremely harsh environments.

A wide input voltage range of 8 to 17 volts (12V typ.) greatly simplifies system power supply requirements. It is fully compatible with 12V automotive applications.

Osprey is compatible with a variety of popular x86 operating systems including Windows, Windows Embedded, Linux, and VxWorks.

Product customization is available, even in low quantities. Options include conformal coating, BGA underfill, BIOS / splash screen configuration, application specific testing, BOM revision locks, custom labeling, etc. ■
