EZPROTECT™
VIRUS PROTECTION FOR SALESFORCE.COM

Automated anti-virus scanning for Content within Salesforce®

Designed specifically for large enterprises by Salesforce certified architects, EZProtect™ is the ONLY virus scanning application available for Salesforce users and easily scans chatter files, documents, attachments and content for harmful viruses.

Through careful and clean design, EZProtect makes the detection and deletion of viruses, malware, Trojan horses and other malicious threats effortless and painless.

- **Software Viruses** – Much like with a common cold or other virus that a person can catch and spread, software viruses are computer programs that can replicate themselves from computer to computer and have the potential to delete your data or otherwise damage your computer.

- **Malware** – Malware is software that was written with the intent of doing something bad to you or your computer. There are different kinds, from irritating "adware", which might interrupt you with advertisements, to more harmful "spyware" and "key loggers", which seek to capture your data or your online interactions. Thieves can then use this information to steal from your bank accounts or use your credit cards with permission. Or steal your identity!

- **Trojan Horses** – Trojan Horses are a special kind of malware. Instead of just hiding and sneaking onto your computer, Trojan Horse software pretends to be completely benign, or even useful. But at some point, the software will trigger some bad effects or try to capture private data.

Protecting Your Business
We created a simple, elegant, world-class solution to protect Salesforce Users against viruses of all types.

Community Portals
EZProtect is designed to scan community portals (internal and external) for malicious software.

Chatter & Content
EZProtect scans chatter, documents and any uploaded content within Salesforce.

Customization
EZProtect was developed for flexibility and may be customized to accommodate special requirements for Government, Financial and other markets. Contact us to discuss further.
