DeVry University and RefactorU Collaborate to Launch Coding Bootcamp

DeVry University is collaborating with RefactorU on its new web development training program offered through the DeVry Bootcamp. DeVry Bootcamp's inaugural cohort will begin this September in Westminster, Colorado.

"We're delighted to collaborate with DeVry University in bringing this new offering to the market," said Sean Daken, RefactorU CEO. "It's a testament to RefactorU's success in producing the quality junior web developers in Colorado.

DeVry University has a national reputation for quality technical education with over 85 years of heritage. DeVry recognizes the importance of keeping up with today's rapidly changing software platforms.

This new program is designed to not only help students acquire essential technical skills, but also to help students present their personal brand and cultivate a network of new professional contacts. Bootcamp students spend ten weeks in an immersive, hands-on course designed to teach modern full-stack web development frameworks. Students create their own applications and build a portfolio of projects to share with employers. Upon completing the program, graduating students receive a certificate of completion from DeVry. Graduates are invited to attend a local DeVry sponsored career fair to meet prospective employers and to share their work.

To learn more about DeVry University's new coding bootcamp please visit devry.edu/bootcamp. The first DeVry Bootcamp cohort starts September 30, 2016 in Westminster, Colorado.

About RefactorU

RefactorU offers a 10-week, hands-on, immersive Web Application Development Bootcamp in Boulder, Colorado. Students learn modern full-stack development from stand-out instructors, while creating their own applications and building a portfolio of projects to share with employers.
