

Predictive Maintenance and Capacity Planning

- ✓ Detect anomalies and identify outliers that may be an early indicator of issues in device production or deployment.
- ✓ Prevent unplanned system downtime or disruption of production schedule.
- ✓ Remove the complexity once associated with executing advanced and predictive analytics and automatically deliver proactive information to decision-makers to improve quality and performance of complex manufacturing processes.

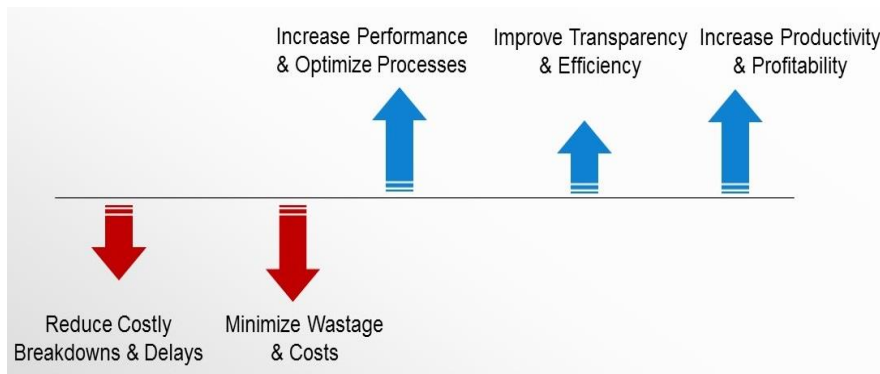

Plant, Warehouse and Field Operations Management

- ✓ Connect disparate silos of information from production line at the plant floor to fleets at the warehouse and people in the field.
- ✓ Get end-to-end visibility of the entire operation via remote monitoring, measurement and constant verification of key performance indicator.
- ✓ Assimilate raw data from every node, which allows analyzing and developing patterns for improved and accurate prediction.

Real-time and Automated Problem Resolution

- ✓ Remotely monitor equipment conditions and operating parameters to automatically trigger alerts.
- ✓ Proactively initiate responses via an automated JD Edwards module that can communicate directly with the machines.
- ✓ Resolve the problem accurately and in near-real time without human intervention. Automated troubleshooting minimizes downtime and avoids potential failures.

Connect your Production, Processes and People with your ERP Architecture

Why *one*Connect

- Machines “talk” directly with the JD Edwards EnterpriseOne modules.
- Integration and synchronization of all assets (hardware, software and people) within any size and scope of manufacturing system.
- Advanced data analytics and knowledge management beyond conventional Business Intelligence products.
- Customizable solution to meet varied Client needs, serviced by team of professional who are passionate about technology and innovation.

About EOne Infotech

EOne Infotech was founded and incorporated in Piscataway, NJ in the year 2004. EOne Infotech implements and supports a wide variety of enterprise resources planning (ERP) software suites designed to help executives and managers of fast-growing companies maximize business performance by maintaining visibility and control of their operations. We specialize in the JD Edwards, Oracle, SAP & Business Intelligence applications and work in Windows, Unix, and AS400 environments.
