

## Press Release

# BizjetMobile Announces First Fleet Customer in North America

September 7, 2016 08:00 AM (EDT) New York

BizjetMobile today announced Emergency Airlift as the first North American fleet customer for CHiiMP Smart.

CHiiMP Smart utilizes Bluetooth Smart technology to deliver simple and affordable inflight messaging to both Apple and Android devices. It is the only Iridium connectivity platform in the world that can accommodate up to ten pilots and passengers simultaneously.

Emergency Airlift CEO Ed Langerveld said, “After four months flying CHiiMP Smart on a single aircraft, we recognised the simplicity of use and low-operating costs, prompting us to extend the system fleet-wide. It will enhance our commitment to high-quality patient care by keeping our pilots, crew and passengers connected whenever we fly.”

BizjetMobile Sales Director Ally McDougle said, “BizjetMobile is delighted to continue its relationship with Emergency Airlift as the first North American fleet customer. This signing further legitimises CHiiMP Smart as a proven low-cost solution for organisations requiring simple text and email inflight connectivity.”

BizjetMobile is currently offering CHiiMP Smart – including 12 months free data plus 500 minutes of voice – for only \$9,990.

BizjetMobile will be displaying its range of connectivity solutions at NBAA-BACE on November 1-3, FL, USA (Booth 3465).

## About BizjetMobile

BizjetMobile is the world's leading supplier of Bluetooth Smart inflight connectivity solutions for business jets. Since 2014 we have offered the only alternative to the expensive Wi-Fi platform, having equipped a range of aircraft from Turboprops to Boeings. Adam Chapman and Dan Rich, young entrepreneurs with an understanding of today's dynamic social networking society, are driving the latest BizjetMobile connectivity advancements. In May 2016, European carrier Jetfly launched CHiiMP Smart, the world's first Bluetooth Smart inflight connectivity solution.
