

Health Systems *informatics*

Transforming healthcare, one patient at a time.

POULATION HEALTH MANAGEMENT SERVICES

Develop programs to improve patient health, drive value and measure success

Population health is an all-encompassing program for healthcare organizations and it is important to treat it as a mindset or philosophy—not a project—to be internalized into daily workings and processes. Tackling such a large, complex program can be overwhelming.

Health Systems *informatics* (HS*i*) can help leadership develop a population health strategy along with its implementation and analysis, or provide expertise to support individual pieces within the overall strategy.

HS*i* is dedicated to delivering high quality consulting and support services that enable healthcare organizations to achieve their population health goals, our services include:

- Strategic Services
- Assessment & Prioritization
- Program Management
- Analytics Build & Testing

POPULATION HEALTH EXPERTISE

With more than 10 years of consulting experience, HS*i* strives to stay ahead of the ever-changing healthcare market. Most hospitals are still in the early stages of leveraging healthcare IT and data to facilitate population health. HS*i* has partnered with some of the most prestigious healthcare organizations in the country to develop a proven methodology and tool set to ensure a successful population health program.

Our approach focuses on outcome-based deliverables tailored to organization specific initiatives and objectives. Building on the foundation of EHR population health and accountable care management modules such as Epic's Healthy Planet and MEDITECH READY, HS*i*'s Population Health Management Service empowers hospitals to develop and implement a unified vision for their organization. By leveraging best practices and advanced analytics, HS*i* helps hospital systems aggregate and segment population data, understand risk, make data-driven clinical decisions and proactively manage patient relationships and community integration.

HS*i*'s proven methodology for Population Health Management includes four key components:

- Define
- Assess
- Implement
- Measure

POPULATION HEALTH & VALUE-BASED CARE

Population health management is tied to an increasing number of government regulations and quality initiatives. Payment reform in healthcare and shift to value-based care are prompting healthcare organizations to more intently manage the overall health of populations to reduce admissions, drive down cost and improve the health of the nation.

HSi's proven methodology—define, assess, implement and measure—allows hospitals to transform aggregate data into actionable knowledge to improve care coordination across the continuum, better navigate the transition to value-based care, and measure success.

QUALITY OUTCOMES

Implementing a population health management strategy helps clinicians accomplish more of the recommended care steps for patients and meet requirements for reimbursement. With clinicians spending significant amount of time in an EHR system, integrating population health management tools into existing EHRs is a natural progression. EHR systems offer a suite of reports and dashboards to help hospitals assist, identify, engage and track patients.

HSi's Certified Epic and MEDITECH consultants provide expert guidance to ensure successful program development, adoption and outcomes:

- **Strategic leadership** to develop a strong population health infrastructure
- **Assessment guidance** to understand organizational readiness, including people, process and technology
- **Program management** to monitor progress and identify focus areas to drive value
- **Advanced analytics expertise** to gain data-driven insights to improve outcomes in quality, patient engagement, care coordination and fiscal responsibility

We are proud to help healthcare systems build and manage an effective population health management program—allowing them to achieve the highest standard of patient care, staff satisfaction and financial outcomes.

Population Health Management Service Menu

Strategic Services (Define)

- Program Development
- Governance Structures
- Success Measures & Expected Outcomes (ROI/VOI)

Assessment & Prioritization (Assess)

- Readiness Assessment & Gap Analysis
- People, Process & Technology

Program Management (Implement)

- Certified Application Resources
- Business Intelligence & Data Warehouse Measure

Analytics Build & Testing (Measure)

- Quality Data Definition
- Report Development & Distribution

"HSi understands every organization has a unique set of deliverables for their Population Health strategy—from desired outcomes and focus areas to drivers and geography. We partner with our clients to develop a program critical to their organizational success."
