ProcessPro Supports CAP for Charitable Giving

St. Cloud, MN, November 3, 2016 – ProcessPro, leading mid-market ERP software solution company, is pleased to announce its support of the Community Action Partnership of Scott, Carver and Dakota Counties, Minnesota (CAP) for its 2016 charitable giving campaign.

“Every year our staff enjoys teaming up to give back to our local community before the holiday season,” states Joe Blauert, ProcessPro General Manager. “We admire CAP’s efforts to help build strong communities, which is a cause we are also passionate about.”

The CAP Agency assists and empowers people to achieve social and economic well-being by providing services in partnership with local communities. Through the dedicated efforts of CAP’s staff, along with the help of their many partners – individuals, local businesses, schools, public agencies, other non-profits and faith-based organization – they have become a leading suburban nonprofit organization. Their mission is to create strong communities where individuals and families have access to quality early childhood education, nutritious food, and safe and stable housing through 24 various programs and services they offer to individuals of all ages.

ProcessPro, along with parent company Open Systems, Inc., has chosen to focus this year’s annual campaign efforts on raising donations and awareness for CAP’s efforts. The staff from both ProcessPro and Open Systems united on October 31st for a day of friendly competition, themed games, and a silent auction to raise funds and collect nonperishable food items. The Open Systems Halloween Charity Fundraiser is a long standing annual tradition with proceeds staying in the local community. This is third year donations have been raised for CAP.

“This was an excellent opportunity for team building and networking between the staff of the ProcessPro division and that of the larger organization, it couldn’t have worked out better,” states Blauert.

For more information on CAP please visit: <https://www.capagency.org/>.

###
