Chinavasion's New Electronic Skateboard – Rethink The Way You Travel

Keeping up with the growing global demand for rideables, <u>Chinavasion</u> has just introduced the newest range of electric skateboards that is set to change the way people travel.

What started off with the Segway has now turned into an entire industry filled with a huge range of motorized electric ridables, such as skateboards, roller skates and other self-balancing one and two wheels scooters.

In order to keep pace with this trend and the rising demand for rideable gadgets, e-commerce trailblazer Chinavasion, has introduced the latest generations of Electric Skateboards that are lighter, faster and more efficient than all predecessors.

As stated by Ms. Rose Li, PR manager at Chinavasion, "Lately we have seen a major increase in the demand for motorized electronic gadgets, especially in the US and EU markets. To meet these demands Chianvasion has just introduced its customers to our latest motorized gadget, the Maxfind Electronic Skateboard."

Chinavasion aims to take the lead among electronic wholesalers within the rideable electronic market and has introduced numerous rideables throughout the past few years. The Maxfind E-board is the company's latest catch and it's set to rethink the way you travel.

This cool rideable gadget is very similar to any regular skateboard, but unlike traditional boards it has two powerful 360W motors and a high capacity lithium-ion battery, that allows you to reach speeds and distances like never before.

Although traditional skateboarding skills may be difficult to gain, this E-Board is easy to control and provides a platform on which both advanced riders and beginners alike can enjoy countless hours' worth of outdoor fun.

Ms. Rose Li revealed that, "I enjoy the opportunity to try out some of our latest fun gadgets and gizmos, and even without having any prior skateboarding skills I was able to easily control and ride this E-board."

Being easily controllable through a mini remote control, the Maxfind skateboard efficiently allows you to adjust your speed with just the touch of a finger.

Additionally, for the more advanced user, the skateboard can be moved to a restriction free mode where it can reach speeds of up to 28 kilometers per hour, allowing this electronic longboard to provide consumers with a thrilling ride to any destination in next to no time.

Besides allowing stunning speeds the Maxfind skatboard's motors provide great control, helping riders to slow down easily when required. The remote control can be used to reduce speed and quickly come to a standstill, so even new boarders can ride downhill in a safe and controlled manner, without needing to worry about losing control.

Like most motorized gadgets this electric skateboard features a lightweight and compact battery. Packing 22000mAh, this <u>cool electronic gadget</u> can cover distances up to a stunning 16KM before running out of juice.

Additionally, this cool motorized gadget can also be used as a regular skateboard. Ms. Li mentioned, "What makes the Maxfind E-Board really special is that you do not necessarily have to use it as an electronic skateboard, as you can also use it without its battery. Allowing you to cruise down the streets normally yet, when an extra push in the back is needed, its motor is always there to back you up". This also means users won't be left carrying the board if the battery runs down, although at around 5.5Kg it's considerably lighter than most alternative rideables.

Crafted out of high quality wood and topped off with an anti-slip grip tape, this electronic longboard holds a design that is made to withstand all sorts of environments and terrains. Its large wheels allow it to be ridden over uneven surfaces without loss of balance so it can handle many surfaces with ease.

Ms. Rose Li informed, "Chinavasion has already seen a great interest of its customers in similar products and is expecting the sales of the Maxfind skateboard to rise significantly during the upcoming holiday months."

"Having this magnificent product in stock just before the holiday season allows our B2B customers to truly take advantage of this Chinese gadget during their domestic Christmas sales." Ms. Rose Li. stated.

For those of you that want to see this electric skateboard in action can check out their <u>video</u> on the Chinavasion's YouTube channel.
