

Managing biobanking and clinical research data using spreadsheets? Switch to an advanced SaaS LIMS

Pay as you go!

 **BioTracer**

An Advanced Sample Management Software

 **CloudLIMS Lite**

A Laboratory Information Management System

Complimentary Services

Product Hosting,
Maintenance & Backups

Module Configuration

Unlimited Training
& Technical Support

Legacy Data Migration

Upgrade Assurance

Key Benefits

360° Traceability

Comprehensive features for managing laboratory operations

Zero Capex

No investment in IT infrastructure

Accessibility

Access, transact & track information from anywhere

Collaboration

Collaborate & share in real-time

Save Time

Save time on initial installation & upgrades

Security and Reliability

Highest Up-time

99.9% @365x24x7 availability

Foolproof Security

Multilevel security on SOC compliant IT infrastructure

No Data Loss

Automatic data backup

Comprehensive Compliance

Follows 21 CFR Part 11, HIPAA & CAP Accreditation guidelines

What Our Happy Customers Say

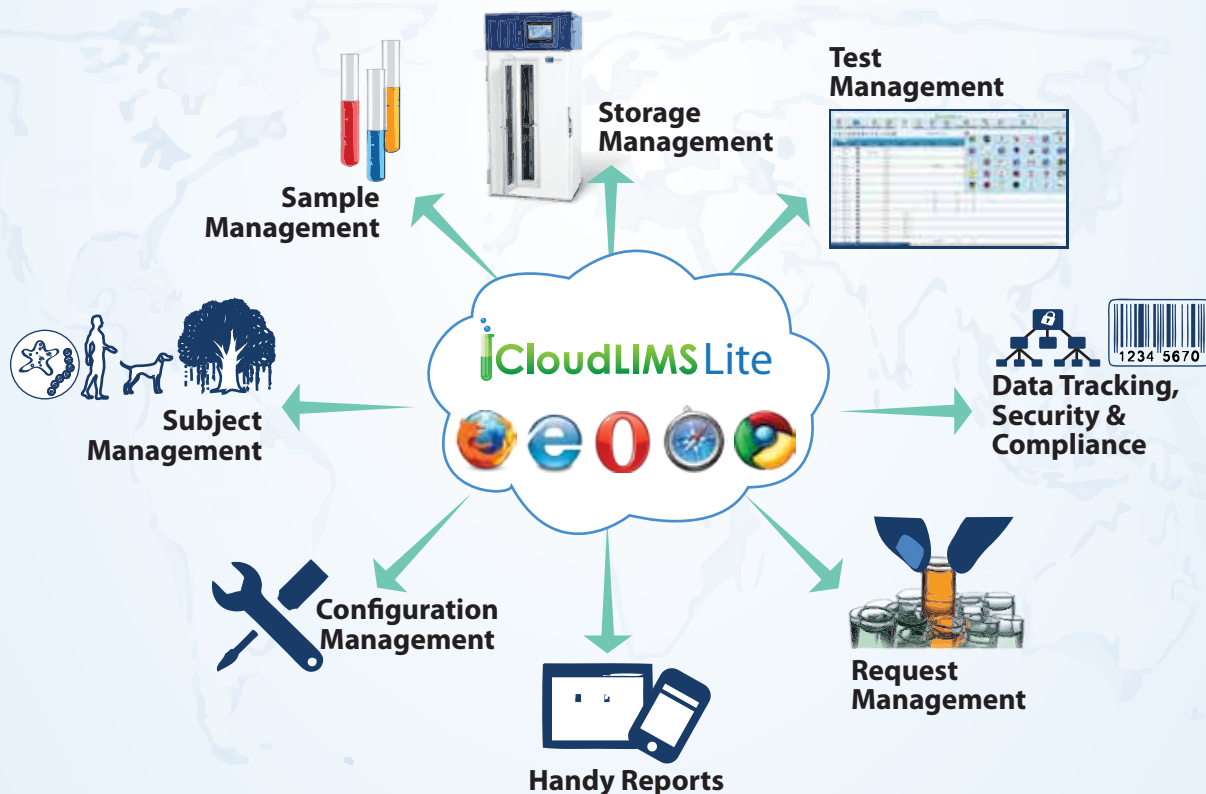

"We are very pleased to use BioTracer for managing multi-lab work-flows involving the collection of several different types of samples. With BioTracer's enhanced user group management and the unique configuration module, we could accommodate diverse work flows of six different types of labs into one single product. The access level control helps us manage data integrity. The complimentary data migration services were a big plus for us. It took the onus of uploading all the data off our shoulders and enabled us to get started with BioTracer without dedicated staff. I recommend BioTracer to whoever needs a LIMS solution for the life sciences."

"With CloudLIMS Lite, we were able to load our legacy data of 60,000 samples rapidly using the universal uploader. The uploader directly maps our existing data to the data fields in CloudLIMS Lite. The data fields and our laboratory workflows were easy to configure, which allowed for a quick deployment!"

The University Of Sheffield.
