

Instant Car Wash

ICW

If we can assist to make your car washing simple and environmentally acceptable, then we both meet our goals.

The ICW is simple, with a selector switch for Wash or Rinse. Recycled water is used through a Hydroblaster or microfiber brush, to remove stubborn dirt and bugs, just like a self serve car wash. When finished, a quick flip of the switch changes the wand to rinse (with fresh or spot free water).

The Hydrokleen ICW incorporates mechanical and biological filtration and will provide clean and odor free recycled water. No sewer connection? No problem.
