

Enterprise Connectivity Solutions | 360° Visibility

Certified Cisco Solutions

Joint Solution Overview

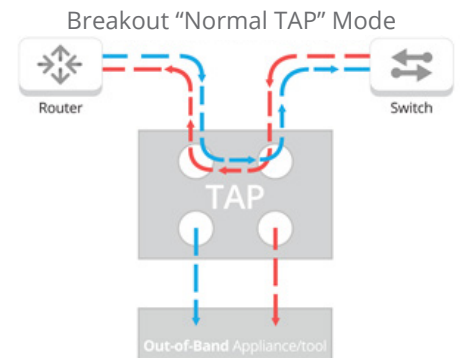

Garland Technology and Performance Vision offer a comprehensive platform for 360° network traffic visibility into Cisco Networks by ensuring that every bit, byte and packet® becomes visible wherever it flows: physical network, Virtual, Cloud and Software Defined Networks (SDN).

- Scalable design
- Granular and exhaustive
- Full stack performance analytics:
 - Network usage
 - Network Performance Management (NPM)
 - User experience
 - Application Performance Management (APM)

The combination of Garland Network test access points (TAPs), Performance Vision's physical and virtual capture appliances allows you to monitor your Cisco Network.

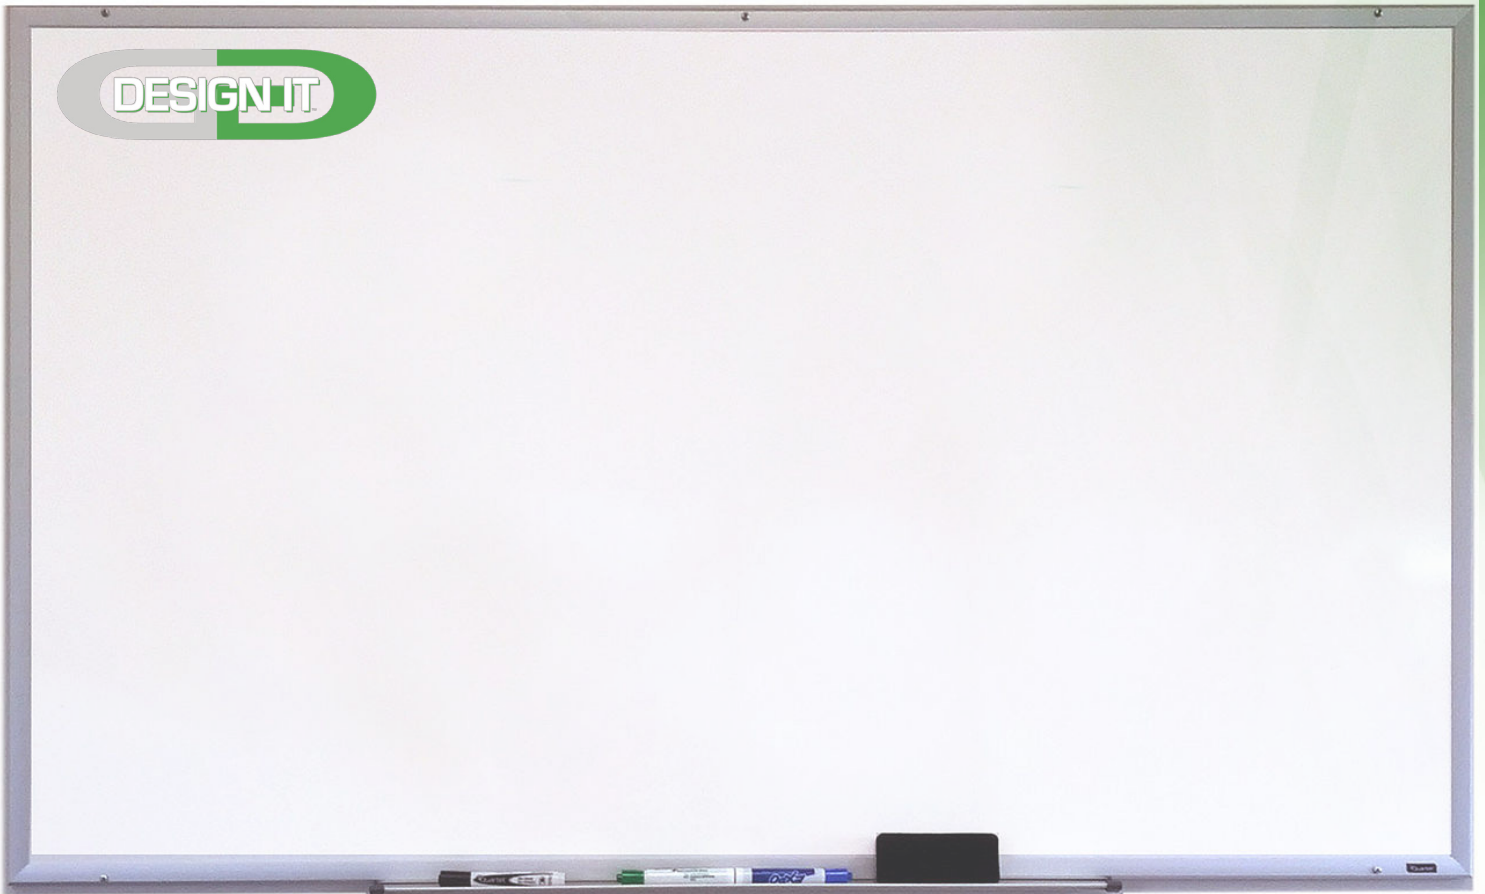

TAP Traffic Flow

Network test access points (TAPs) are Cisco approved hardware tools that allows you to monitor your network. All fiber breakout TAPs are passive, purpose-built hardware devices.

What project are you planning today?

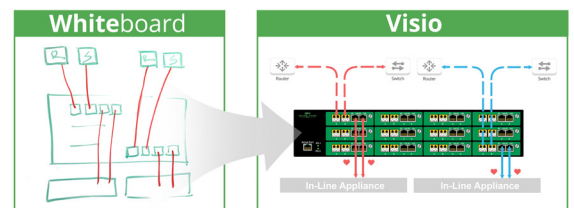

That's the first question you'll receive from Garland Technology's network designers. Just like you, our team at Garland is comprised of experienced network professionals that want to solve network connectivity, visibility, access and monitoring problems.

We Design IT for you in four simple Steps:

- 1 Discuss the application and objectives of your current project.
- 2 Determine basic network connectivity requirements.
- 3 Our team creates a whiteboard drawing tailored to your needs.
- 4 You receive a Visio drawing to present to your team.

Garland works with your vendor of choice in the solution areas of network analyzers, intrusion detection systems, forensics, application performance monitoring and more.
