A person is rappelling down a rock face. The image is overlaid with a semi-transparent teal color. The person is wearing a harness and a blue bag, and is holding a rope that extends down the page. The background shows the texture of the rock and some green vegetation.

# Active Indexing

# What is an active index?

Active indexes offer the benefits of index funds while still seeking to outperform the overall market

# Why should I consider active indexing?

Over the long term, active indexing has outperformed both the market and traditional active funds

Where will my funds be held?

A person is rappelling down a rock face. The image is overlaid with a semi-transparent teal color. The person is wearing a harness and a blue bag, and is holding a rope. The background shows the texture of the rock and the person's shadow.

# Important Disclosures

# Important Disclosures

AlphaClone, Inc., is registered as an investment adviser with the United States Securities and Exchange Commission (SEC). Registration does not constitute an endorsement of the firm by the SEC nor does it indicate that the Adviser has attained a particular level of skill or ability. Investors should consider a strategy's investment objectives, risks, charges and expenses carefully before investing. The strategy is subject to management risk and an investor's return and principal value of investment may fluctuate, so that an investment, when liquidated, may be worth more or less than their original investment. AlphaClone, Inc., ("AlphaClone" or the "Adviser") Active Indexes are rules-based investment strategies that rely on institutional investor SEC disclosures as a primary source of information. AlphaClone makes no representation or warranty as to the completeness of that information. Overall market risk, including volatility, may affect the value of the individual instruments in which the strategy invests. No current or prospective client should assume future performance of any specific investment strategy will be profitable or equal to past performance levels. All investment strategies have the potential for profit or loss. Changes in investment strategies, contributions or withdrawals may cause the performance results of your portfolio to differ materially from the reported composite performance. Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment will either be suitable or profitable for a client's investment portfolio. Historical performance results for market indices generally do not reflect the deduction of transaction and/or custodial charges or the deduction of an investment-management fee, the incurrence of which would have the effect of decreasing historical performance results. Economic factors, market conditions and investment strategies will affect the performance of any portfolio and there are no assurances that it will match or outperform any particular benchmark. The S&P 500 Total Return Index is the total return version of the S&P 500 Index which includes the effects of reinvested dividends. The S&P 500 Index is a capitalization-weighted index of 500 stocks designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries. The Russell 2000 Index is an index measuring the performance of approximately 2,000 small-cap companies in the Russell 3000 Index, which is made up of 3,000 of the biggest U.S. stocks. The Russell 2000 serves as a benchmark for small-cap stocks in the United States. The MSCI All Country World Index Ex-US is a capitalization-weighted index that tracks international equities. The index serves as a benchmark for foreign equities. The investment strategies and types of securities held by the relevant comparison indices may be substantially different from the investment strategy and the types of securities held by any AlphaClone strategy.

The AlphaClone Hedge Fund Downside Hedged Index (ALPHACLN) is an index of high conviction equity holdings derived from hedge fund public disclosures and selected by AlphaClone. ALPHACLN was launched in October 11, 2011 and is calculated by Solactive. The AlphaClone International Downside Hedged Index (ALFIIX) is an index of high conviction ADR holdings derived from hedge fund public disclosures and selected by AlphaClone. ALFIIX was launched on November 5, 2015 and is calculated by Solactive. The AlphaClone Value Manager Index (ALFVIX) is an index of high conviction holdings derived from the public disclosures of value-oriented managers selected by AlphaClone. ALFVIX was launched on September 1, 2016 and is calculated by AlphaClone, Inc.. The AlphaClone Small Cap Index is an index of high conviction small capitalization stocks derived from hedge fund public disclosures and selected by AlphaClone. ALFSIX was launched on September 1, 2016 and is calculated by AlphaClone, Inc. Index calculation methodology can be obtained by downloading the respective indexes' guidelines document or by contacting AlphaClone, Inc. Index performance is presented for general information purposes only. Index performance that is prior to the date each index was launched relates only to a hypothetical model of past performance. Performance does not relate to any asset management products based on any of our indexes. No allowance has been made for trading costs or management fees which would reduce investment performance. Actual results may differ. In addition to any separate account fee earned by AlphaClone for management a separate account, the firm earns a fee from exchange traded funds (ETFs) that track the above indexes.

# Important Disclosures (cont.)

The performance data quoted represents past performance. Past performance does not guarantee future results. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance information quoted. The performance quoted reflects the reinvestment of dividends and capital gains, is net of expenses and, where applicable, does not reflect the maximum sales charge of 5.75%. Such a fee, if taken into consideration, will reduce the performance quoted above.

Investors should consider the investment objectives, risks, charges and expenses of the investment company carefully before investing. The prospectus and, if available, the summary prospectus contain this and other important information about the investment company. Request a prospectus from the offering institution or your financial representative. Read carefully before investing.

Investments in this report are subject to market risk, including the possible loss of principal. It should be assumed that investments listed in this report are not FDIC insured. The value of the portfolio will fluctuate with the value of the underlying securities. Investors should consider an investment's investment objective, risks, charges, and expenses carefully before investing. In the case of mutual funds and ETFs (Exchange Traded Funds) a prospectus is available which contains this and other important information and should be read carefully before investing. Diversification does not ensure a profit and may not protect against loss in declining markets.

In addition to the normal risks associated with investing, Investments in smaller companies typically exhibit higher volatility as do investments that do not have significant volume; international investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from economic or political instability in other nations; emerging markets involve heightened risks related to the same factors, as well as increased volatility and lower trading volume; bonds and bond funds will decrease in value as interest rates rise and are subject to credit risk, which refers to the possibility that the debt issuers may not be able to make principal and interest payments or may have their debt downgraded by ratings agencies.

Mutual funds may contain sales charges, expenses, management fees, and breakpoint discounts (quantity discounts); which vary from mutual fund to mutual fund. Therefore, you should discuss these issues with your financial representative and review each mutual fund's prospectus and statement of additional information to get the specific information regarding the charges and breakpoint discounts associated with a particular mutual fund. Please see the mutual fund prospectus and statement of additional information for details about sales charges, expenses, management fees, discount programs (rights of accumulation, letter of intent, breakpoint discounts, etc). A mutual fund's total expense ratio is shown as provided by a third party vendor and may or may not contain fee waivers or expense reimbursements that may be in effect for the fund. Please refer to the fee table in the fund's prospectus.

ETFs trade like a stock, and ETFs may trade for less than their net asset value. See prospectus for details.

Investing often generates tax consequences which are not incorporated in this report.

This report is to be used for illustration and discussion purposes only. Please review the underlying assumptions carefully. Past performance is no guarantee of future results and principal values fluctuate with changing market conditions.
