

Real-time Security Monitoring, Dashboards & Alerts for z/OS

CorreLog zDefender™ Visualizer is an affordable Security Information & Event Management (SIEM) system especially designed and pre-configured for use by z/OS security administrators and system programmers. It provides point-and-click functionality from a standard web browser into z/OS security and operational events. zDefender™ Visualizer provides dashboard views, event message correlation, and can send text messages as alerts of security events generated from z/OS.

How does it work? zDefender™ Visualizer for z/OS dashboard collection is a major advancement over the z/OS green screen most familiar to mainframe users. This mainframe SIEM system delivers a clean, web-based GUI with high speed search, and the capability to drill down to z/OS security messages with point-and-click functions. The solution is agent-based, residing on one more LPARs, and collects a full range of mainframe security data from facilities like RACF, CICS, DFSMS, DB2 accesses/failed access attempts, and z/OS console messages, then presents the data in zDefender™ Visualizer dashboards.

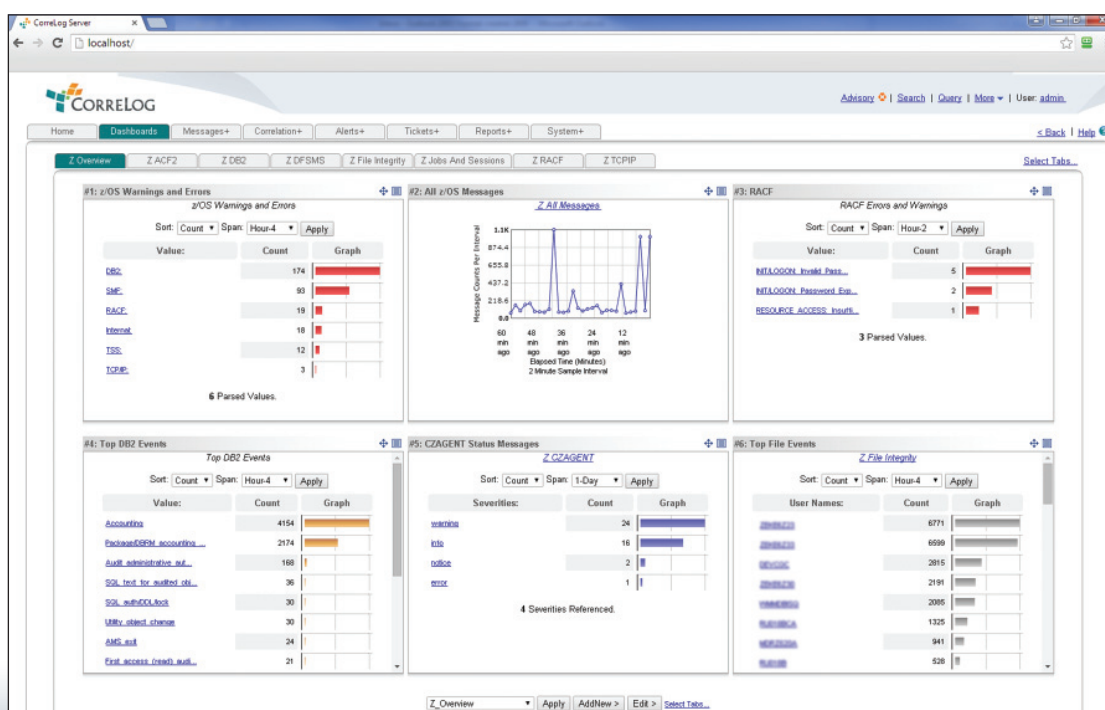

zDefender™ Visualizer for z/OS is based on technology derived from CorreLog's leading SIEM Correlation Server log management product. zDefender™ Visualizer's correlation engine determines if messages are important and, in real time, alerts appropriate personnel of any security issues.

For integration, the API for zDefender™ Visualizer is certified for IBM® Security QRadar®, HP ArcSight, RSA Security Analytics, and CorreLog has a long-standing partnership with McAfee that includes several joint deployments. Additional field integrations have been completed with Splunk, LogRhythm, Dell SecureWorks, and other well-known SIEM brands.

Security Intelligence

OR

Additionally, zDefender™ Visualizer for z/OS can act as a general-purpose collector and SIEM Syslog forwarder in a larger enterprise SIEM strategy. zDefender™ Visualizer can simply provide live mainframe security data to key resources within your organization – that may or may not have access to your enterprise SIEM – utilizing a standard web browser. The solution compliments the functionality that exists within your SIEM system, expanding your team’s visibility to data currently generated from your z/OS.

Frequently Asked Questions

Q: Is zDefender™ Visualizer for z/OS required to use CorreLog’s mainframe product zDefender™ for z/OS?

A: zDefender™ Visualizer for z/OS is NOT REQUIRED to fully use zDefender™ for z/OS. zDefender™ Visualizer is most useful for providing visibility to the mainframe data outside an organization’s SIEM system (such as to select administrators, or mainframe operators.)

Q: Is zDefender™ Visualizer for z/OS considered a replacement for our current SIEM system?

A: zDefender™ Visualizer for z/OS is a comprehensive dashboard and mainframe security system that includes search, correlation, alerting, and reporting. However, it is not intended to replace the SIEM of your organization. Its intent is mostly to provide mainframe IT security visibility in a more functional display than traditional green screens.

Q: How is zDefender™ Visualizer for z/OS licensed?

A: zDefender™ Visualizer for z/OS is licensed separately from the CorreLog zDefender™ for z/OS program (or other CorreLog products). zDefender™ Visualizer is licensed for a certain number of LPARS that are each running a CorreLog agent.

Q: Can I upgrade zDefender™ Visualizer for z/OS to a full CorreLog Correlation Server license?

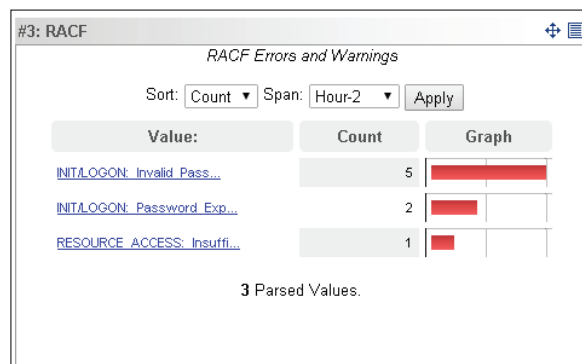

A: If you have zDefender™ Visualizer for z/OS installed, you can upgrade to the full CorreLog Correlation Server system with minimal effort, while keeping your existing configurations. You would simply license more devices. CorreLog team support is available to assist.

Q: Where can I find more information on zDefender™ Visualizer for z/OS?

A: Because the CorreLog Visualization system is based on the CorreLog Correlation Server and CorreLog

Extended Mainframe Visibility via Standard Web Browser

- **z/OS Dashboard Views:** Data can be depicted using a suite of pre-configured dashboards that show mainframe activity related to system-wide security.
- **The software comes with out-of-the-box correlation rules for monitoring a multitude of z/OS security events, including RACF, CICS, DB2 and DFSMS.**
- **High-speed Mainframe Message Search:** Mainframe security messages are collected by zDefender™ Visualizer and indexed for rapid search

Framework, you can find an abundance of information (such as system requirements, administrative configuration, internal security concepts, and other documents) by consulting standard CorreLog Correlation Server documentation found on our website at www.correlog.com.

About CorreLog, Inc.

CorreLog, Inc. is the leading independent software vendor (ISV) for IT security log management and event correlation spanning both distributed and mainframe platforms. CorreLog’s flagship products are CorreLog SIEM Correlation Server, zDefender™ for z/OS, CorreLog zDefender™ Visualizer for z/OS, and CorreLog dbDefender™ for DB2.
