INTEGRATING PLANS

Effective project management is key to ensuring success on projects. The RFI Integrated Plan Room Module and App from Pantera Global Technology transforms the process for contractors. The software provides file sharing, document management, contact management, messaging, reporting, collaboration, RFI, subcontractor qualifications, and contractor directory functionality. The newest release includes an RFI module with drawing markup and annotation capabilities. In addition, a new mobile application was released, which alerts subcontractors of project opportunities in the area, allowing for an increase in bid responses. The mobile app also has features for field picture capture and RFI submission and tracking. What makes this product stand out is the ability to customize the plan room and bid communications.
