Payor Taxonomy Management

At Breakaway Partners we standardize the definition and view of a payer across your organization. Payer data is hierarchical with different vendors having unique interpretations of what this hierarchy should be. By confronting these challenges life science organizations put themselves in a position to increase insight and leverage over the data resources they are already heavily investing in.

Data Integration & Service

By developing a single, company-wide payer taxonomy life science organizations are now able to produce integrated views of their market access data. Instead of analyzing lives, formulary placement, claims adjudication & market performance in discrete views Breakaway Partners builds job-specific dashboards to show relevant data from underlying datasets in a single view. Breakaway Partners Data & Operations group works with your teams to enable deeper analytic insight, develop enhanced strategy and receive more timely tactical feedback by combining data streams and unlocking hidden relationships.

Decision Support Tools & Service Offerings

Leverage integrated market access data by bringing data, decisions and work flow tasks closer together. Breakaway Partners builds custom dashboards and tools that function to support the decisions your organization makes. We segment local geographies according to your sales and managed care field force alignment, target health plans based on policy and prioritize physicians based on payer mix and performance. By aligning data with decisions organizations can drive action, track results and build continually improving feedback loops to ensure that dollars spent drive measurable results.
