

ALGOTRADES

AUTOMATIC INVESTING & DAY TRADING SYSTEMS

Dear Trader & Investor:

First of all, we would like to **THANK YOU** for your acceptance of my automated trading systems information package. We know with great certainty that the framework of the trading strategies, techniques and money management contained within the AlgoTrades system will enable you to become a more consistent and successful trader and investor.

Please understand that we are always available should you require any assistance. Although AlgoTrades is automated and 100% hands-free, our team strives to provide the best customer support in the industry and all your questions are answered.

Long term relationships are important to us. We want this to be a great investment for you, and the most client friendly experience you'll ever have.

Sincerely,

Chris Vermeulen

Algorithmic Trading Strategies – Why Traders and Investors Choose AlgoTrades

Our algorithmic trading strategies are designed to provide diversification to your portfolio by trading a variety of asset classes from stocks, exchanged traded funds, options and futures. Applying trend-following, counter-trend trading, and range bound cycle based strategies we provide a systematic, highly profitable, and automated trading decision process that we believe has the potential to provide consistent returns for our clients.*

We offer many different trading strategies all which can be manually followed and traded, or automatically traded within your brokerage account, that is up to you and your comfort zone.

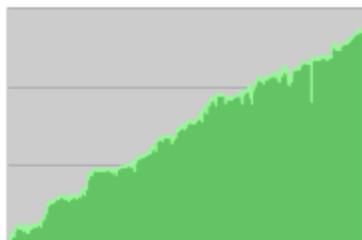

Algorithmic Market Timing Methods:*

- 1.** Short-term momentum shifts between overbought and oversold market conditions are traded creating potential profit making opportunities in either market direction.
- 2.** Trend-following takes advantage of extended multi-month price movements in either direction up or down.
- 3.** Cycles based trading provides potential profit making opportunities during a range bound sideways market. Some of the largest gains happen during choppy market conditions with this strategy.**

*Give AlgoTrades a try
and let us wow you with its trades
and give you an investing experience unlike any other.*

Trading Strategies & Designs

What AlgoTrades Is – AlgoTrades is an all-in-one trading system that combines unique algorithmic trading strategies to provide you with a complete trading or investment solution for your capital. AlgoTrades provides diversity in many ways; Provides systems for stocks, funds, options, and futures. It also provides strategies that focus on day trading, swing trading, longer positions, and even has strategies trading the VIX (Fear Index). Because you have the ability to have multiple systems trading in your account you have the added stability of portfolio diversification.

Value Added With Algorithmic Trading Strategies

AlgoTrades seeks to add value by maximizing return efficiency, a statistical measurement of performance. We attempt to add value through consistent performance, regardless of the current market condition or trend. Our intricate risk management rules and systems provide peace of mind to investors, low portfolio volatility and a low correlation to stock market returns.**

We believe riding the stock market roller coaster and watching your portfolio fall with the financial market can be avoided through the use of our algorithmic trading strategies.**

The values we provide to our customers include state-of-the-art research, properly managed positions, high transparency levels and an overall peace of mind that their money is working hard for them so they can reach their financial goals sooner.**

What Our Algorithmic Trading Strategies Are Not

Our algorithmic trading strategies are not market-neutral, meaning we do not hedge our position because we seek to profit from the stock market. Instead, our trades are directional based.

Trading with AlgoTrades carries the risk of loss as does with all investments.

However, we are very conscious and aware of the importance of controlling risk, and believe that trading using our algorithmic trading strategies and automated approach successfully manages risk while seeking attractive returns.

Our Algorithmic Trading Strategies – Description & Philosophy

We believe the AlgoTrades algorithmic trading systems are everything an investor wants and needs to generate consistent long term growth and income.**

Our unique proprietary indicators and algorithms allow you to take advantage of opportunities, regardless of the market's direction (up, down, or sideways). AlgoTrades' advanced filters monitor the market on a tick by tick basis evaluating each entry, profit or loss, and stop placement level in real-time, so you don't have to.

Trading Strategies & Design

What Our Systems Trade:

The systems trade different and various investment vehicles including: individual stocks, stock & ETF options, exchange traded funds, volatility index instruments (VIX), and futures contracts.

Position Management Used:

Some of our systems have dynamic position management which actively trims and adds to positions during overbought and oversold market conditions.

Account Size Needed:

Minimum trading account required varies for each system. You can [review any specific system on our website](#) to learn more about required capital for a system. It is important to know that if a system for example is trading \$20,000, but you only want to trade \$10,000 of your capital, you would simply trade half the position size, and better yet, you can setup autotrading to automatically for you and you set the system scaling to 50%, meaning our platform will only trade half of what the system is trading in your brokerage account. This is clearly shown and explained during the autotrading setup process, don't worry.

The market does not always provide quality trading opportunities; thus, systems may not trigger any trades on a regular basis, but this rarely happens. While the systems do exceptionally well during trending markets, when the market becomes choppy some systems become more active and trade more frequently. This could generate several small winning or losing trades in a short period of time. The reality is all systems will have losing trades and times when they underperform, it is part of trading.*

Trend reversals are the majority of the systems losing trades. When a trend reversal occurs, the most recent position entered will automatically be closed and a new position in the direction of the trend will eventually be opened. With that said, all systems have losing trades and take losses from time to time.

Trading Strategies & Design

NOTE – ALGORITHMIC TRADING STRATEGY:

It is very important to understand that the AlgoTrades trading systems are designed for long term growth. Your outlook and performance should be focused on annual growth not month to month gyrations and returns. Each year the stock market typically has a sweet spot where 80% of the gains will be generated within a couple months so commitment to a system is important for long term success.

These trading methodologies were stumbled upon over 17 years of trading, and were developed into complete trading strategies. Thus, after years of extensive testing, and reviewing trading of each system, AlgoTrades systems are now available for individual investors to help level the playing field with the pros, hedge funds and private equity firms on Wall Street.*

Our algorithmic trading strategies use several data points to power decision making and trades. We believe the use of proper cycles, volume ratios, trends, volatility, market sentiment, and pattern recognition puts the probability in our favor. AlgoTrades uses many algorithmic trading strategies and it identifies the best strategy for the current market condition. Then, it automatically trades for you. All trades are entered as market orders as we believe this approach ensures the best possible price, performance, and makes sure all clients enter and exit position when needed.**

For More Information Visit: www.AlgoTrades.net

*No representation is being made that utilizing the algorithm will result in profitable trading or be free of risk of loss. There is a substantial risk of loss associated with futures trading and exchange traded funds.

** These results are based on simulated or hypothetical performance results that have certain inherent limitations. Unlike the results shown in an actual performance record, these results do not represent actual trading. Also, because these trades have not actually been executed, these results may have under- or over-compensated for the impact, if any, of certain market factors, such as lack of liquidity. Simulated or hypothetical trading programs in general are also subject to the fact that they are designed with the benefit of hindsight. No representation is being made that any account will or is likely to achieve profits or losses similar to these being shown.

Frequently Asked Questions

What is an AlgoTrades System?

It is a 100% automated trading algorithm that deploys multiple trading strategies to trade the financial markets. AlgoTrades Automated Trading Systems enter and exit trades, manages stops and profit targets automatically, 100% hands-free for those using our Autotrading Feature. If you don't want to autotrade, you can simply follow each systems trades manually as each trade is sent via email and SMS text alert.

Who Is It for?

AlgoTrades is for anyone who wants highly accurate and profit trades to follow, and those who use our Autotrading Feature can have their money professionally traded for them so they don't have to follow or manage positions.

How Much Capital Is Required?

Each system trades a difference amount of capital. You can [view each system and its details](#) on our website.

What Does it Trade?

We have systems that trade stocks, options, ETFs, and futures.

Why Do I need AlgoTrades?

If you're trading, investment or retirement account has not seen substantial growth during both rising and falling markets then AlgoTrades systems are the solution for consistent gains, no matter the market direction.

Can I Make Money In a Falling Market?

Yes it is possible, AlgoTrades uses trading strategies that allow it to profit during a falling market (bear market). This is done through the use of inverse ETFs, short selling, and/or options.

How Much Does AlgoTrades Cost?

Each system has a different cost and some with free trials. You can [view each system and its details](#) on our website

Do I Need To Leave My Current Advisor or Broker?

No, You can manually trade the signals yourself, also AlgoTrades systems should be viewed as a diversification investment. The golden rule for investing is to never put all your money into one basket (investment).

Only a portion of your investment capital should be used with any investment strategy. So you can keep the majority of your capital with your current advisor and broker while having the AlgoTrades trading a portion of it with a brokerage firm that supports our systems.

WHAT BROKER DO I NEED TO AUTOTRADE YOUR SYSTEMS?

USA & International Clients Broker

The Fox Group (This representative will help setup your account)

Contact The Fox Group if you have any questions about this process: (312) 756-0945

Open E-Cry (OEC)/Gain Capital: Clients in the U. S. and Overseas. Open Account: [CLICK HERE](#)

Canadian Clients

Mark Bennett (This representative will help setup your account)

Contact Mark Bennett (514)-242-7898

Interactive Brokers: For prospective clients that reside in Canada.

Select "ProTrack Application" [CLICK HERE](#) to open account.

How Long Will It Take To See Results?

AlgoTrades focuses on trading the most active cycles and trends. These cycles and trends fluctuate in length each year, and as a result it may take a few months for your account to start showing returns similar to the returns seen in our historical performance. AlgoTrades should be viewed and used as an annual commitment and investment.

What Happens If There Is Another Flash Crash (Market Crash)?

Our trading system is only active in the markets a small amount of the time. So the odds favor that we will not have your money in the market during that time. But if it were to happen, our system and broker has built in precautions to limit exposure and risk. Most systems automatically have the protective stop loss orders running after being executed. This means if the price starts to move against us, our liquidating orders will be in place and our trade will be exited.

Letter of Recommendation – Rick Deleff

To Whom It May Concern:

In March 2014 I set up an account to invest using the futures auto trading system developed by Chris Vermeulen.

I didn't have the time or the knowledge to do this type of investing and achieve the type of consistent results that I believe can be achieved utilizing these automated investing techniques. I previously utilized an option trading system that also had risk management rules and trading rules established. I even allowed an experienced broker to do the trades for me based on his 9 years of experience. The result was mismanaged trades that didn't follow the established rules. There still needed to be an individual to pull the trigger on all the trades. The result was a loss of money after almost 4 years. I then continued my search for a better way.

With the AlgoTrades system there are no people involved in making the trades once the system is tied to the brokerage account. Once I saw the extensive back testing done on this system and also read the Technical Trading Mastery book to learn more about Chris and his investing philosophy and extensive experience I set up an account and began trading. So far it has met my expectations.

Having a degree in electrical engineering, I had a 17 year career designing automated control systems. Once a system is designed properly you just lock up the cabinet, leave the room and let the system work. This is exactly what Chris has done with the different investing platforms.

I believe this will give me as a small investor the same odds to achieve high investment returns as the large institutional investors with very little of my time. I would highly recommend anyone with the minimum capital requirements give the AlgoTradies System strong consideration.

Regards
Rick Deleff
Wisconsin,USA

Letter of Recommendation – Satish Bhave

To Whom It May Concern:

I have been one of the pioneering subscribers to AlgoTrades auto-trading system since its introduction and I am happy to say that it has, so far, performed above my expectations. Before that, I have been doing my own investments for few years and I have been facing challenges...

- 1) Being a working professional, it's always a challenge to find time to read and track so many investment options and then study the charts / price actions etc. to make wise decisions.
- 2) Being in Asia, there is always time zone problem and it's usually very late when the markets are trading at their peaks to make right decisions.
- 3) Once you make trading decisions, it's very difficult to control your emotions and many times I have cut my position in profit early while letting large losses run.
- 4) Any investment decision needs to protect your capital well and many times your personal judgment runs against it.

So, I was looking for a solution to overcome these issues and that's when Chris introduced AlgoTrades and I jumped into it. He has proven that his system takes care of all above issues. One of the key aspects I like of Chris' trading philosophy is about safety of capital and how he always tries to protect it and not go after risky trades while still delivering a handsome return on your capital.

I hope AlgoTrade system continues to grow my portfolio and I hope Chris looks at introducing more such systems dealing in forex / commodities etc. that will benefit us. Wishing all the best to AlgoTrades and Chris and looking forward to prosperous growth and relationship.

All the best!
Satish Bhave
Asia

Letter of Recommendation – Nikesh Simha

I am writing this short letter of recommendation for Chris Vermeulen and his AlgoTrades Automated Investing System to highlight his personal and professional excellence and the system's great trading record so far.

I have been a subscriber to the AlgoTrades automated investing systems for a very short time now – just over a month. I have been extremely satisfied by the system performance and Chris's professionalism. As you can imagine, I was very hesitant at first and I called the customer service number to speak to someone in person. I got through to Chris himself, and he explained how the system works, the things that are integral in the system to keep risk at a minimum and he answered all my questions.

So far the system has performed as advertised and I hope it performs as well in down markets too. The feature that drew me to his system was the hypothetical performance it has achieved in bear markets.

I whole heartedly recommend Chris and his trading system for part of your portfolio.

Sincerely
Nikesh Simha
Coppell , TX

Client Testimonials

"The only work I have to do is to setup the account. Once it is done, AlgoTrades took over and started making money for me. Sometimes small gains and sometimes big gains but always making money on each trade. I have tried many investment service and newsletters in the past, this is the best investment service for me, because it is completely hands-free and consistently making money for me."

Jason Dai, Toronto, Canada

"It's so hard to know what's for real and what isn't. Chris Vermeulen's AlgoTrades automated investing system is for real. I'm seeing it work in real-time, in my real account, right now."

Sheldon Krasner, Boca Raton, Florida, USA

"I am very happy since joining the AlgoTrades. I was a bit apprehensive in investing in the USA from Australia but I wanted to diversify and this is working well. I missed a big winner that would have been a 5% gain on my portfolio but they have all been positive and at present after 4 months I am up 8.5%."

The good thing is there are only a few trades every few weeks and this combines well with my other trading in Australia. The account seems to be quite independent from yourself which is added security and I look forward to continuing our success together in the long term. Every trading day I get an end of day summary which also is reassuring."

Julie Moloney, Australia

CHRIS VERMEULEN - FOUNDER

Chris Vermeulen, founder of AlgoTrades Systems., is an internationally recognized market technical analyst and trader. Involved in the markets since 1997.

Chris' mission is to help his customers boost their investment performance while reducing market exposure and portfolio volatility.

Chris is also the founder and CEO of Technical Traders Ltd., a financial education and investment firm. Chris is responsible for managing his team of research analysts and creation of its newsletter publications.

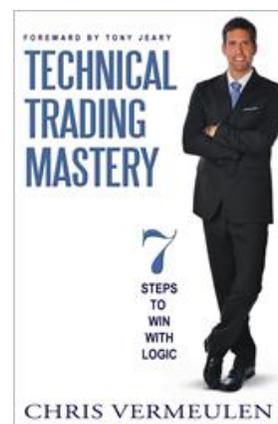

Through years of research, trading and helping thousands of individual investors around the world. He designed an automated algorithmic trading system for the S&P 500 index which solves his customers biggest problem related to investing in the stock market: the ability to profit in both a rising and falling market.

AlgoTrades' automated trading systems allows individuals to invest using the ES mini futures contracts. It is supported by many leading brokerage firms including: OEC OpenECry, Gain Capital, and Interactive Brokers.

He is the author of the popular book "[Technical Trading Mastery - 7 Steps To Win With Logic](#)". He has also been featured on the cover of AmalgaTrader Magazine, Futures Magazine, The Street, Trader Interview, Kitco, Financial Sense, Dick Davis Investment Digest and dozens of other financial websites. His list of personal and professional relationships approaches 27,000, people with whom he connects and shares his passion for trading and market with.

Chris graduated a three-year program from Seneca College where he specialized in business operations management.

Chris enjoys boating, kiteboarding, mountain biking, fishing and has his ultralight pilots license. He resides in the Toronto area with his wife Kristen and two children.

Announcing the Launch of AlgoTrades.net Automated Trading System Which Levels the Playing Field between Hedge Funds and Individual Investor

AlgoTrades.net automated trading system identifies investment opportunities and manages each trade automatically for its clients. This low frequency trading system has traders scratching their head.

Collingwood, Ontario (PRWEB) March 20, 2014 AlgoTrades.net is proud to announce the launch of its algorithmic trading system, a 100% automated trading system that uses several professional trading strategies to trade the S&P 500. Setting up an account takes a matter of minutes for those who have an account with one of the brokerage firms the system works with.

AlgoTrades is intended for all investors; the new investor looking to make a first investment or the seasoned investor who has been trading for decades. It requires absolutely no work on the investor's part. All trades are executed automatically. Also, AlgoTrades adjusts protective stops and profit targets on its own. AlgoTrades uses advanced filters to monitor the market on a tick-by-tick basis carefully evaluating each entry, profit or loss, or stop placement level in real time. All of this analysis is done automatically, in the blink of an eye, so their clients can focus on the more important things in life.

AlgoTrades is the result of years of work creating a methodology that works before being converted into an automated trading system. After seven years, AlgoTrades is now available to individual investors to give them a competitive edge on Wall Street against pros, private equity firms, and hedge funds. Effective in rising, falling and even sideways market conditions, AlgoTrades can improve profitability while reducing portfolio volatility.

AlgoTrades was developed by Chris Vermeulen using several data points to power the decision making and trading processes. There are three main algorithmic trading strategies incorporated in the system and the algorithmic trading system identifies the best strategy for the current market environment. This gives the smart investor the chance to get the best possible price and performance.

“ Do you know how some people make money in both a rising and falling stock market? Well, what we do is provide clients with an automated trading strategy that does this for them. ”

Vermeulen states, “I prefer to help and work with fellow traders like myself and I like to support the underdog.”
