

## Introducing SpecuLume®

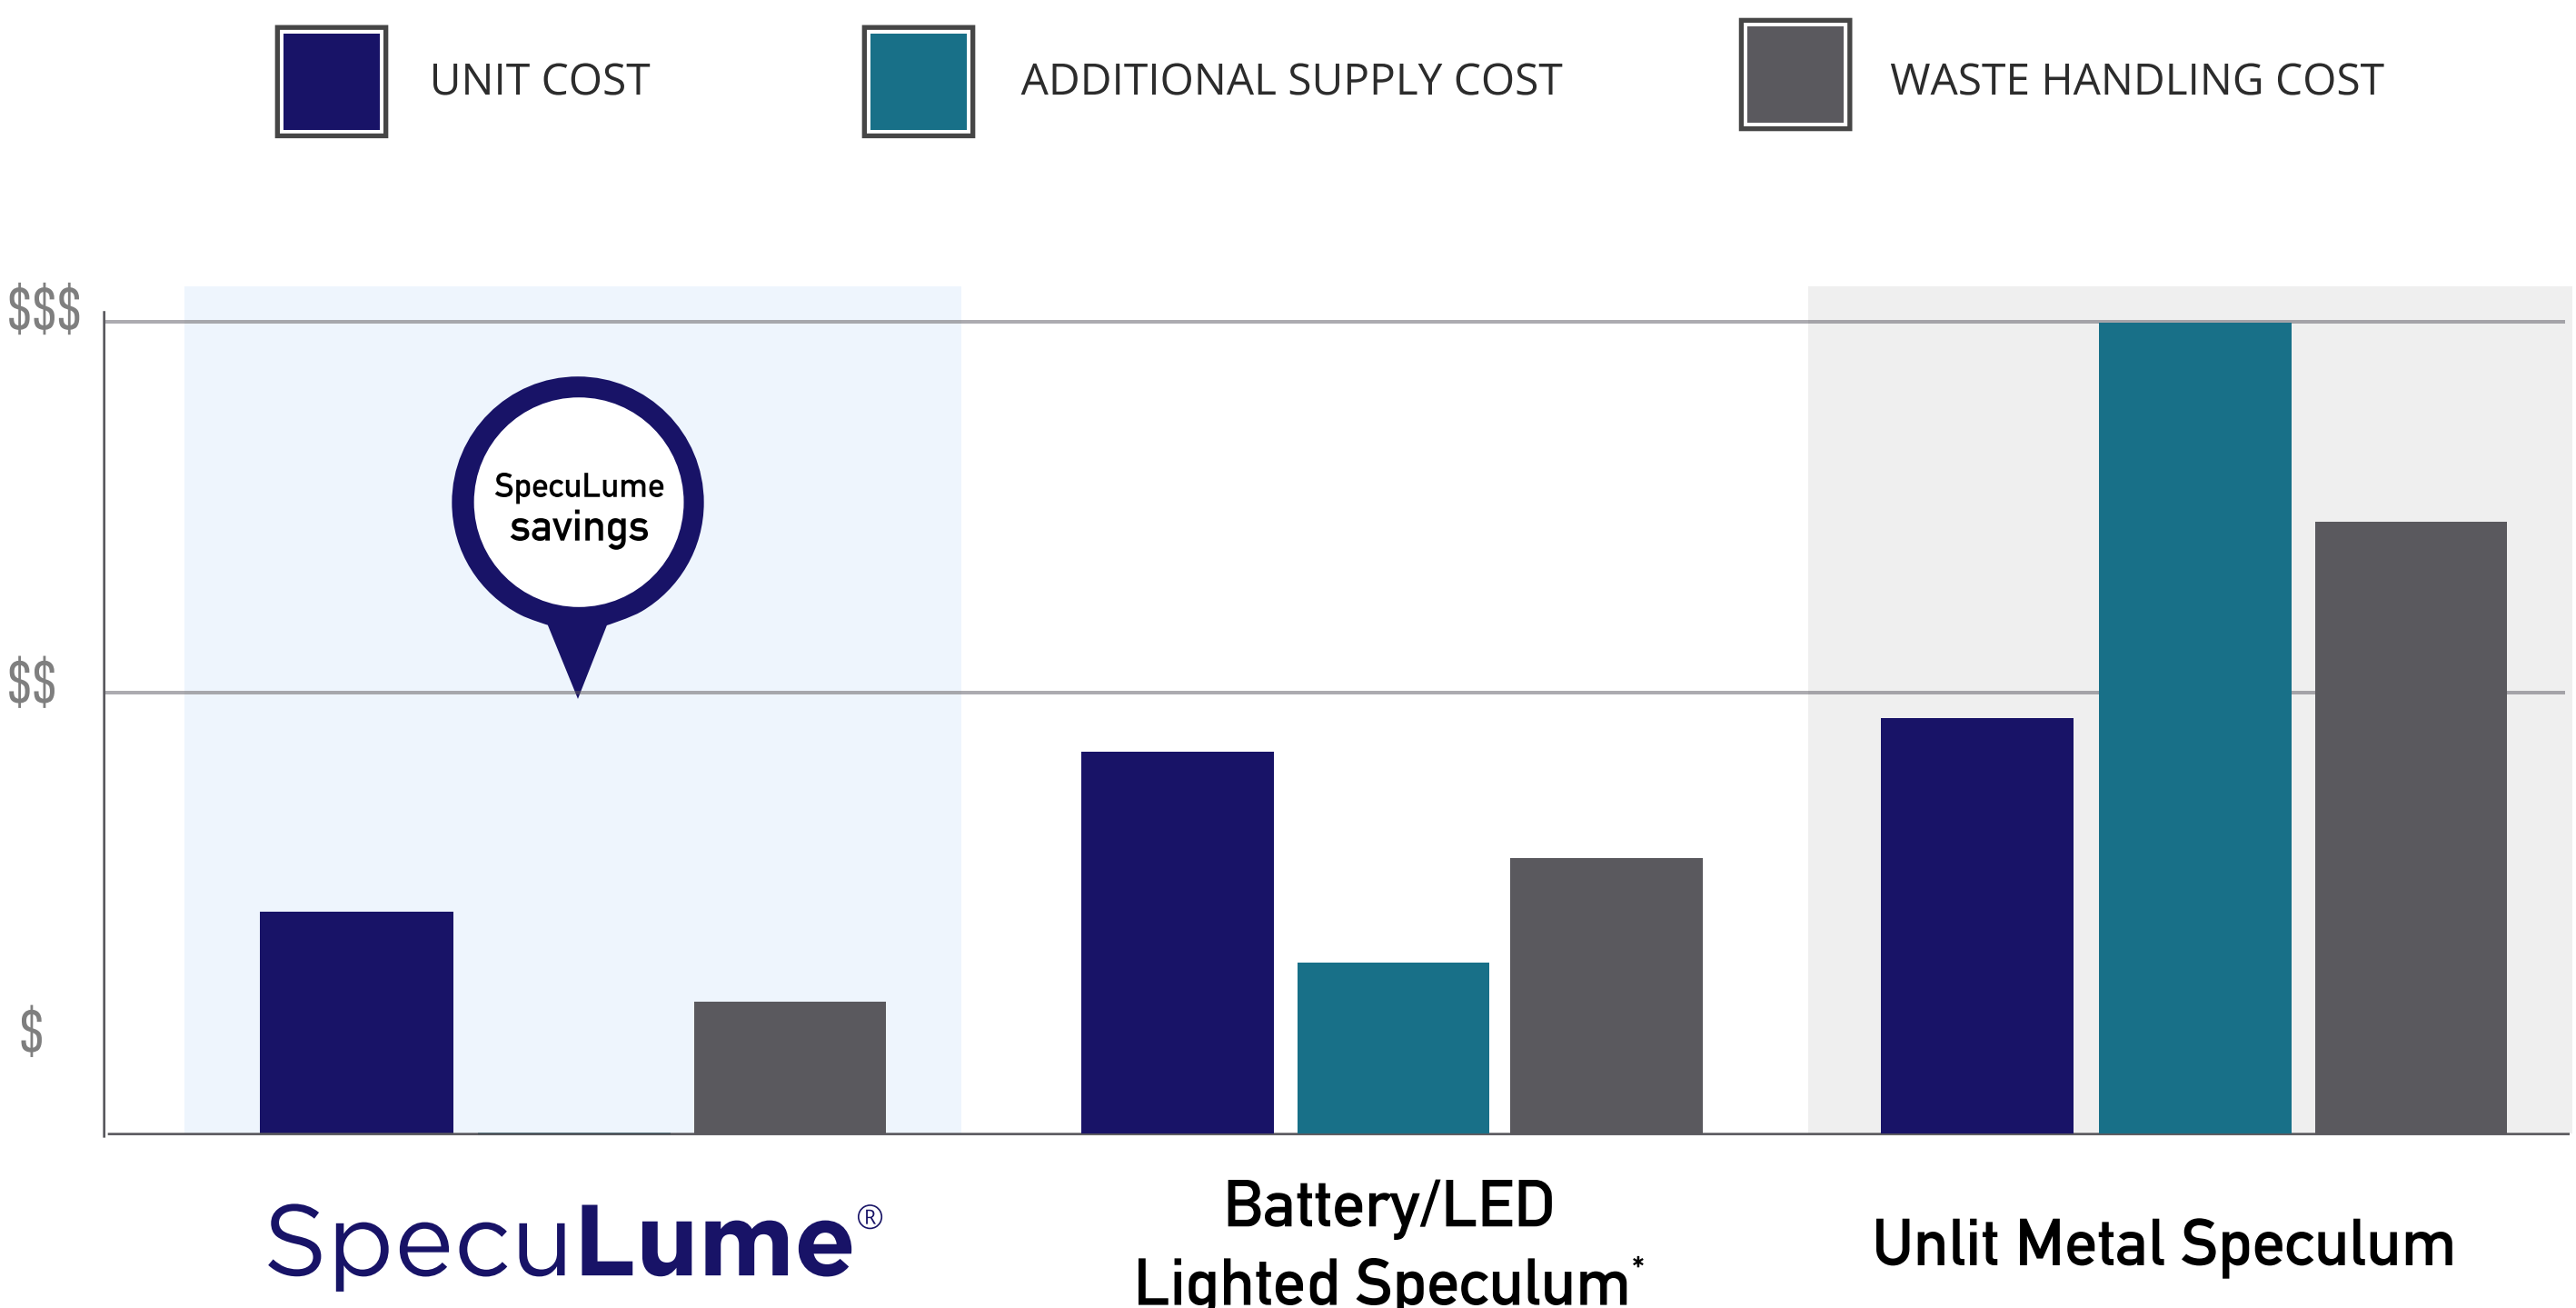

Combining the brilliance of chemiluminescent light with a common device like a vaginal speculum, we've created a special innovation capable of changing OB/GYN practices.

This single-use, disposable speculum provides optimal diffused light to the examination area without batteries, electricity or external sources.

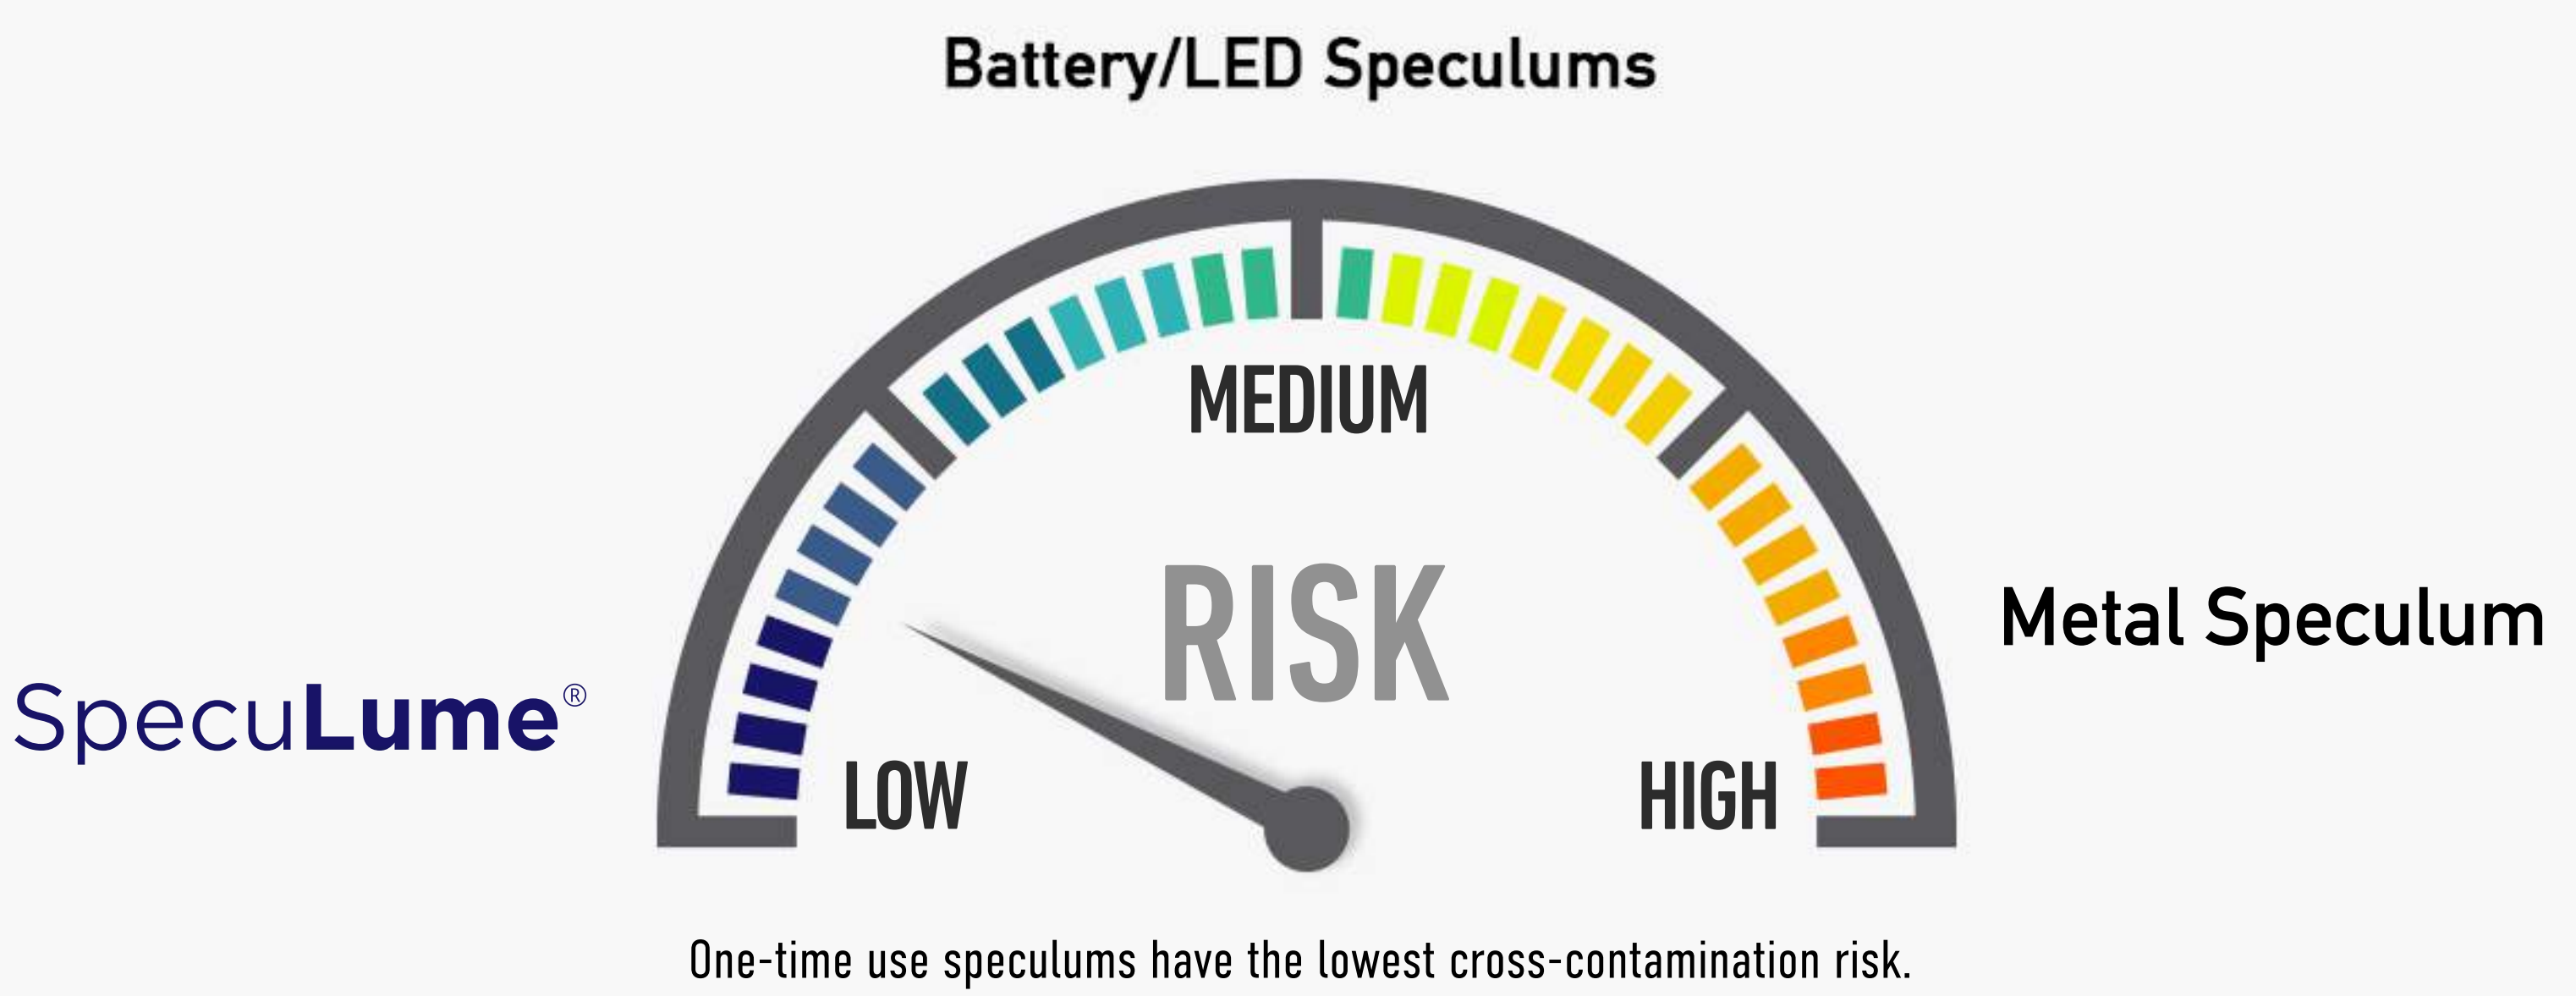

The typical OB/GYN averages **78** examinations per week, totaling 3,900 per year. Reusable instrument cleaning and clinical waste management can get expensive.

### Why It's Worth the Switch!

### Potential Cross-Contamination Risk

### Operational & Personnel Handling Time\*

#### SpecuLume®

One-time use SpecuLume can be used then thrown away.

#### Battery/LED Speculums

Battery and LED Speculums require more time for staff to prepare, dispose of and clean.

#### Metal Speculum

With extensive cleaning procedures, metal speculums add to overall operational time and handling costs.

\*Excluding patient examination time.

## Top Reasons to Choose SpecuLume®

15+ MINUTES OF BRILLIANT ILLUMINATION

BATTERY-FREE

EMITS NO HEAT

SAFE TO USE

SINGLE-USE

NO DISASSEMBLY REQUIRED

DISPOSE AS CLINICAL WASTE
