WinCan Releases White Paper on the Benefits of Cloud-based Asset Management Software.

“Sewer Asset Data Moves to the Cloud,” a new white paper from WinCan, details the benefits of utilizing the cloud for sewer inspection data.

MURTEN, SWITZERLAND—May 19, 2017—WinCan has released a new FREE white paper on the benefits of utilizing cloud-based sewer asset management. Cloud-based solutions have proliferated across industries as a way to increase efficiency and improve accessibility. This white paper details the biggest benefits cloud-based asset management software provides—accessibility, security, redundancy and version control—and why it can make sewer inspection and data management more efficient and effective.

“Utilizing cloud-based hosting for data and asset management is one of the best technological upgrades a municipality can make,” says Mike Russin, Business Manager. “Cloud-based software makes it easier to access and share data while removing the burden of maintaining your own servers. You and your contractors can get the most up-to-date data from anywhere, and you don’t need to be concerned with data breaches or loss.”

This white paper was written as part of WinCan’s commitment to both informing the industry of new technological developments and providing software utilizing those developments.

About WinCan.

WinCan™ was the original pipe inspection and asset management software when it entered the market in 1990. Today, it’s the most trusted pipeline software brand worldwide, thanks to continuous innovation and exceptional support. WinCan™ transforms raw inspection data into the intelligence municipalities and contractors need to make critical maintenance decisions. The software’s measurement tools help quantify defects, and sophisticated search capabilities filter observations by any combination of criteria. Its report generator automatically summarizes inspection findings using a standard or user-defined template. Native support for GIS mapping, side-scanning and 3D are among WinCan’s™ most innovative features.

WinCan™ pipe inspection and asset management software is supported and distributed in the Americas exclusively by WinCan LLC. As the only WinCan™-certified software consultancy, WinCan LLC is uniquely positioned to deliver support, training, customization and integration with all common municipal databases and mapping software programs. WinCan LLC works directly with end users, and also with inspection equipment manufacturers, helping them deliver integrated hardware/software solutions that allow their customers to document, analyze and report pipeline condition.
