**Envirosight Releases New White Paper on Benefits of Zoom Assessment.**

*Free resource details benefits of zoom assessment and process for implementation.*

RANDOLPH, NJ—May 25, 2017— A new FREE white paper from Envirosight, "Zoom into Sewer Cleaning," discusses strategies for pre- and post-jetting inspection using zoom assessment technology. Jet cleaning sewer lines is essential to maintaining a smooth-flowing, reliable collection system. Even so, if an operator can't see the condition of pipes, jetting can be wasteful, time-consuming and ultimately unsuccessful. In this white paper, Envirosight discusses zoom assessment (using a camera with high-powered zoom optics and illumination to view pipes from an adjoining manhole), and the rapid insight it can provide to jetter crews as they prepare to clean, and as they judge the efficacy of their efforts afterward.

"Jetting without a visual assessment of pipe condition wastes time and resources," says author and Envirosight Channel Development Manager Steve Sebastian. "We wanted to provide our customers with a clear, concise guide to understanding how zoom assessment makes jetting workflows safer and more productive while consuming less money, time and resources." Pre- and post-jetting visual assessments provide many benefits, including the insight needed to choose the best jetter nozzle for pipe conditions and assurance afterward that the pipe is fully clean.

This white paper was developed as part of Envirosight's commitment to creating and sharing resources that benefit wastewater professionals.
