

FSMA Compliance At Your Fingertips.

- ✓ Commodities tracked: 550+
- ✓ Countries of origin: 180+
- ✓ Global data sources: 110+
- ✓ New reports per day: 35+
- ✓ Total incident records: 95,000+
- ✓ Suppliers tracked: 15,000+

Identify, Predict, Pre-Empt

A key requirement of FSMA compliance is to implement a food safety plan that identifies “known or reasonably foreseeable biological, chemical and physical hazards” in your ingredient supply chain. The HorizonScan database contains thousands of up to date fraud and contamination reports. Within a few minutes of logging in you’ll have access to data and analytical tools that will help you immediately determine which adulterants pose the most likely threat to your products.

FEATURES

- Search by commodity, country, threat type, date, more
- Choose/monitor over 550+ commodities
- Access 15+ years of historical data
- Automatic alerts
- Latest hazard highlights
- Risk assessment tools
- Global supplier data
- Mobile device access

BENEFITS

- Comply with FSMA
- Simplify supply chain risk assessment
- Save time
- Be among the first to know about new incidents
- Identify high-risk suppliers
- Reduce risk of recalls
- Rank analytical priority for a wide range of hazards
- Protect your customers and your brand

Instantly Access Supply Chain Hazards

EVENTS TRACKED

- Fraud, adulteration, misbranding
- Microbial contaminants
- Pesticide residues
- Mycotoxins
- Allergens
- GMOs
- Heavy metals
- Dioxins, PCBs, PAHs
- Residues of veterinary drugs

COMMODITY CATEGORIES

- Animal Products
- Beverages
- Canned Foods
- Cereals and Grains
- Chemicals used in Foods
- Feedstuff
- Fruits (Dried and Fresh)
- Fungi
- Herbs and Infusions

- Nuts
- Oilseeds
- Oils and fats
- Processed Foods
- Pulses and Pulse Products
- Seafood
- Spices
- Sugar Plants
- Vegetables (Dried and Fresh)

Information on Over 15,000 Global Suppliers: FSMA's final rule of foreign supplier verification programs states that an importer must evaluate "the foreign supplier's food safety history." HorizonScan's Supplier Check Tool allows you to quickly see whether a supplier has a documented history of uncorrected contamination or adulteration incidents.

"I've been a fan of the tool since our trial last year; the ability to set parameters on what you want reports on, and those you do not certainly saves a great deal of time. The ability to access many years of reports is also a very beneficial tool, and can help in making purchasing decisions."

Jeremy Schneider - Quality Assurance Manager, Supply Chain - Chipotle Mexican Grill

"With the wide range of proteins, ingredients, fruit, breeding, etc... that we use across our varied production platforms, we were looking for a way to identify trends and at-risk incidents in a global view. **HorizonScan has provided that snapshot for us.** I specifically use the service when approving new suppliers, both domestic and imported, to review for current and past issues."

Deb Taylor - Director, Supply Chain Quality - Advance Pierre Foods
