## Value Proposition Overview

Here is a quick overview of Redemption Technologies, Inc. benefits:

- Corporate Buyback Program
- Open Source E-commerce Marketing Platform
- Global Appeal
- Integration with Android and iOS
- Decentralized Currency
- Tokens Based on Ethereum Platform
- Anonymous Redemptions for Products and Services
- Discounted Offerings from Merchants

## Abstract

The goal of this white paper is to outline the issues cryptocurrencies face in everyday business transactions and how our solution can improve the blockchain and decentralized currencies. First, we explain why we have a buyback program and how it benefits the owners of our token. Second, we explain why we chose to develop the token on the Ethereum platform, how we plan to roll out our open source platform on a global scale, who we are and what technology partners we have. Next, we explain how the proceeds from the crowdsale will be used to further develop the Redemption Technologies Platform, build a global network, enhance our integration into iOS and Android mobile applications, and to assemble our global integration teams. Finally, we share our roadmap to further develop the blockchain community by bridging the gap between consumers and merchants using cryptocurrencies around the planet.

## Initial Crowdsale and Buyback Program

Unlike most other cryptocurrency tokens, the amount of BUZZ tokens in existence will **DECREASE** over time based on our corporate buy back policy. The buyback policy strengthens the token by decreasing the supply of the remaining tokens in existence and will go in force immediately.

### How the Token Buyback Program Works

Each time a BUZZ token is redeemed for a product or service, a fee of 25% to 50% will be charged to the merchant that is advertising on the Redemption Technologies Platform as an advertising fee. 80% of this revenue will go toward continuing corporate operations and additional expansion of the network and 20% of this revenue will be used to **BUY BACK** BUZZ tokens at the then current BUZZ exchange rate.

Tokens that are bought back will be burned forever. These buy backs will occur when optimal market conditions are present. When a buyback occurs, the total amount of BUZZ tokens in existence will **DECREASE**. This strategy potentially increases demand for BUZZ tokens with each product or service purchased on the Redemption Technologies Platform.

According to Investopedia, repurchase programs increase value. “The idea is simple: because a company can't act as its own shareholder, repurchased shares are absorbed by the company, and the number of outstanding shares on the market are reduced. When this happens, the relative ownership stake of each investor increases because there are fewer shares, or claims, on the earnings of the company.”

## **Redemption Technologies Inc.**

Redemption Technologies Inc. is a worldwide open source e-commerce marketplace platform that anonymously connects subscribers with local merchants that do not accept cryptocurrencies. The Redemption Technologies Platform will be an open source infrastructure and offered free to developers. We expect developers to go well beyond the current working model of the software and offer enhanced integration solutions to the thousands of app developers around the world. The platform eliminates the two main problems facing cryptocurrencies and the blockchain today, anonymous liquidity into everyday purchases, and the time it takes to verify a transaction while making a purchase at a local merchant.

The Redemption Technologies Platform will primarily offer discounted goods and services from local merchants who advertise on the platform, allowing subscribers to receive local offerings at a discount and merchants to increase sales revenue. Subscribers would convert cryptocurrencies like Ether and Bitcoin into new spendable BUZZ tokens. BUZZ tokens allow subscribers the ability to purchase discounted goods and services anonymously, the way cryptocurrencies were intended to be spent.

Merchants are paid for goods and services by Redemption Technologies in the currency of their choice allowing them to accept cryptocurrencies without being paid in cryptocurrency. Subscribers never make a payment to a merchant directly, which keeps users identities hidden and still provides advertisers the ability to track the performance of their advertising campaigns and ROI.

The Redemption Technologies Platform will be open source and integrates into any mobile application allowing BUZZ tokens to be used by the 4.7 billion worldwide mobile devices through an endless supply of Android and iOS applications.

Cryptocurrency payments are currently viewed unfavorably by local merchant's due to the time it takes to confirm a transaction and the complexity in receiving cryptocurrencies as a form of payment. While other solutions to this problem exist, these solutions require the user to register with user identifiable information such as name, address, confirmed phone number, social security numbers. Registration on the Redemption Technologies Platform only requires an email address and password. A customer paying with a cryptocurrency has usually left a business before a transaction confirmation can occur, leaving merchants feeling insecure. BUZZ tokens are pre-confirmed and therefore transactions happen almost instantly.

## Token Offering

Redemption Technologies will be offering a new blockchain token named BUZZ. The tokens will be ERC-20 compliant and available and tradeable on the open exchanges after the crowdsale ends. There will be 225 million tokens created on the Ethereum network for the crowdsale and any tokens not sold or allocated after the crowdsale will be burned forever, further decreasing available tokens. Unlike other cryptocurrencies, a percentage of tokens will be burned and pulled from circulation through our buyback program as they get redeemed on the global Redemption Technologies Platform. The tokens will be placed on the exchanges allowing their price to be easily calculated into any currency worldwide. BUZZ tokens will be redeemable for goods and services and through exchanges around the globe.

## Why use ERC-20 Compliant Tokens:

Ethereum has created an ecosystem where everything works together seamlessly using tokens to power the network by defining the interface to defined rules, Ethereum based tokens allows exchanges, crypto wallets, and smart contracts to know in advance how any new tokens will interact on the system. In addition, ERC-20 defines six functions that allow other smart contracts to interact within the Ethereum network creating a stable currency. Because of its capacity for smart contracts – and other complicated computing capacities – Ethereum is viewed as more agile, adaptable and stable. Due to its reliability and the growth of decentralized apps (dapps) we felt the Ethereum platform was a logical choice.

## Potential Clients

After testing and integration in the United States through the PartyLink mobile application, our first integration partner, the source code will be released in open source format, allowing the Redemption Technologies Platform to be easily integrated into any mobile application that offers products and services. This will allow the BUZZ tokens to be accessible to the 4.7 billion smartphone users around the world. Revenue is collected through a fee charged to merchants on a pay-per-sale model when a transaction is successfully completed.

The mobile application sales platform is a perfect fit for service related categories; health and fitness, food and drink, events and concerts, beauty and spa, health and fitness; and deals on various products, like apparel, as well as discounted travel packages.

## Merchant Benefits

The following are a few of the benefits of the Redemption Technologies Platform to merchants:

### **Accept Cryptocurrencies as CASH**

Payments to merchants are made in the currency of the merchant's choice from Redemption Technologies, so merchants are indirectly accepting cryptocurrencies without accepting cryptocurrencies. Subscribers make payments to Redemption Technologies for the products and services purchased anonymously and Redemption Technologies acts as a transaction broker.

### **ROI Tracking**

Advertising spending in retail environments is almost impossible to track without conducting a survey of each customer, resulting in the bulk of a merchant's advertising dollars being wasted on unproductive campaigns. By using the Redemption Technologies platform, advertisers can track the exact amount of purchases made by subscribers and at what cost resulting in a perfect ROI calculation.

### **Liquidity of Slow Moving Inventory**

By offering slow moving inventory at a discount on the Redemption Technologies Platform, merchants can quickly liquidate stale inventory and increase retail foot traffic.

### **Relationship Building**

Using pre-negotiated discounts and promotions gives our merchants the ability to create a customer relationship which fosters repeat purchases and client loyalty.

### **Increased Revenue**

By accepting cryptocurrency indirectly, merchants can access a previously inaccessible pool of customers, cryptocurrency users, to purchase their products and services.

### **Pay for Performance Marketing**

Merchants can submit offers to the Redemption Technologies Platform and appear on popular mobile apps without wasting their advertising budget on low performance marketing due to our Pay-Per-Sale revenue model.

### **Increased Market Share**

Mobile apps that are integrated into the Redemption Technologies platform offer discounted products and services and the ability to pay in cryptocurrency, something very few other local merchants provide, as a result, subscribers that prefer making payment in a cryptocurrency will frequent integrated merchants more often than merchants offering non-discounted products and services that require traditional cash or credit cards as forms of payment.

### **Proximity Marketing**

Subscribers can opt-in to instantly receive push notifications of offers in their area from local merchants. Using geofencing, local merchants can present special offers to potential customers at the exact moment they are near the merchant's retail location.

## Subscriber Benefits

A few of the benefits of the Redemption Technologies Platform to subscribers:

### **Discounted Products and Services**

Redemption technologies pre-negotiates purchases with merchants to provide products and services at discounted rates in the form of popular daily deal type offerings. In addition, subscribers receive local offers pinpointed to their location.

### **Cryptocurrency Liquidity**

Cryptocurrencies are converted to BUZZ tokens by subscribers and BUZZ tokens are then redeemed for purchases. This drastically increases the ability to use cryptocurrencies in everyday life and allows BUZZ tokens to be accepted by most merchants, as they require no knowledge of the blockchain process, wallets or cryptocurrencies.

### **Simple Cryptocurrency Purchases**

Show a Redemption Technologies integrated app to a merchant, the merchant presses accept and the money is transferred to the merchant's bank account. No wallets, lengthy transfer times or confusion, just press and go.

### **Anonymous Purchases**

Since the subscriber never pays the merchant directly for goods and services, no user identifiable information is provided to the merchant regarding the payment. This payment system allows the user anonymity through purchasing transactions.

## Working Projects – First Integration

While the Redemption Technology Platform is designed to work with all mobile phone applications on iOS and android, our first integration partner will be Partylink (ThePartylink.com).

BUZZ tokens will be immediately integrated into the PartyLink mobile app. The token integration will allow users to purchase discounted event tickets, food and drinks at popular venues, increasing the ease of use and anonymous liquidity of cryptocurrencies into everyday purchases.

Indirect Payment in  
Preferred Currency

5

Redemption Technologies Receives an  
Advertising Fee From Merchant For  
Brokering Deal

## Projected Revenues

Redemption Technologies earns revenue through the sale of products and services within its platform. When a sale is completed, merchants are charged a fee of 25%-50% on a completed transaction. This fee structure will allow Redemption Technologies to offer a Pay-Per-Sale model at a lower cost than most other Pay-Per-Sale programs, allowing merchants to offer products and services on the platform with a profitable ROI, due to their fixed advertising costs.

Using an open source software model, BUZZ tokens can rapidly be accessible to the 4.7 billion smartphone users around the world through third party applications.

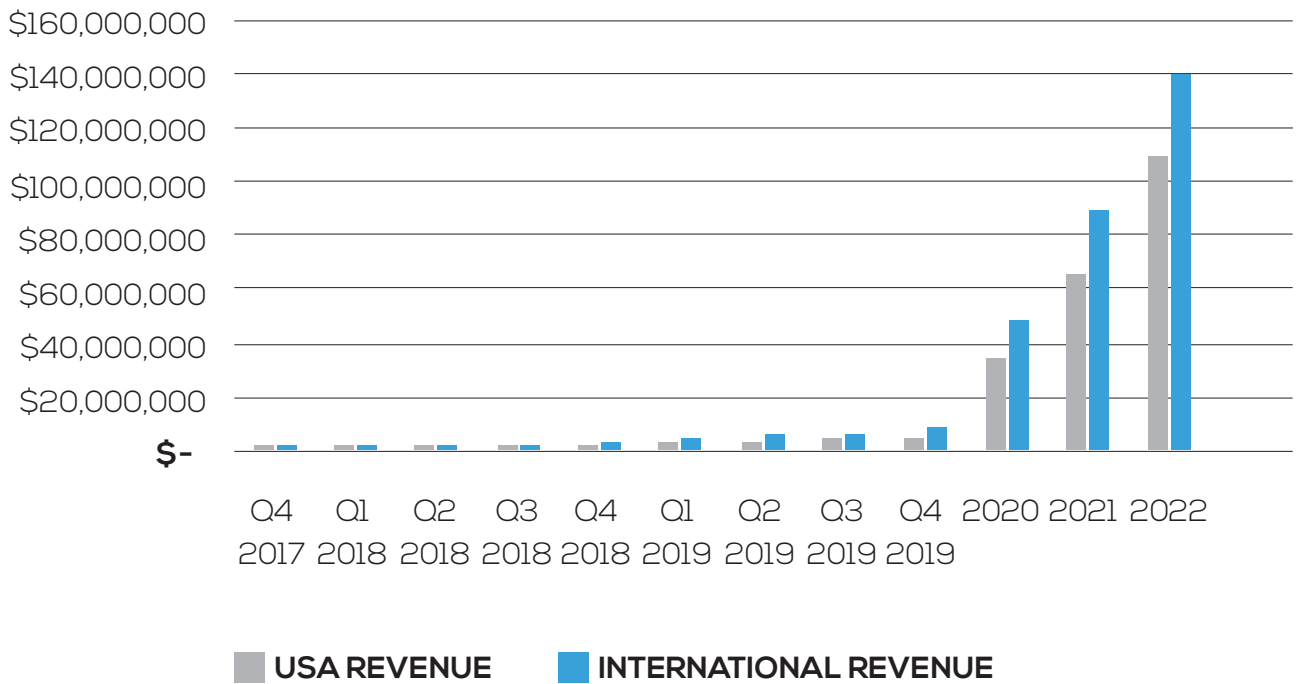

These third-party applications will earn revenue on the same Pay-Per-Sale model, allowing Redemption Technologies to make a profitable ROI as well.

Redemption Technologies will not develop and market its own applications, our open source platform simply needs to be easily integrated into any already developed third party application, allowing rapid growth and an aggressive ROI.

	USA REVENUE	INTERNATIONAL REVENUE	TOTAL REVENUE
Q4 2017	\$350,000	\$150,000	\$500,000
Q1 2018	\$800,000	\$450,000	\$1,250,000

## PROJECTED REVENUE

## Senior Management

### **Stephen Paglianite, CEO**

<https://www.linkedin.com/in/stevepaglianite/>

Stephen Paglianite, CEO of Redemption Technologies, is a serial entrepreneur and has launched and advised multiple multi-million-dollar startups in the last 17 years. Stephen is currently the CEO of ManageMySite Inc., which develops and maintains web properties and mobile applications.

Stephen is also the CEO of PartyLink, our first product integration partner, which will allow us to become fully operational and on our way to profitability very quickly. Certified in SEO, SEM, online marketing and business management.

### **Terry Martine, COO**

<https://www.linkedin.com/in/terry-martine-50779215/>

Terry Martine is a top performer with start-up and Fortune 500 experience. He has a unique blend of purchasing, managerial and operational expertise with advanced skills in strategic planning, international trade negotiations, product development and resource allocation. An entrepreneurial and inspirational leader of tech operations with the proven ability to drive business growth through aggressive online sales initiatives, market trend analysis and market penetration. Talent for designing and launching smart phone business development programs that produce profitable product lines targeted to internet niche markets, delivering significant sales growth and profitability. Terry is an entrepreneur, and seasoned ecommerce business development officer.

### **Kelly Elkins, Chief Legal Council**

<https://www.linkedin.com/in/kelly-elkins-0318861/>

Kelly Elkins is a seasoned attorney demonstrating expertise in a broad range of legal roles. Kelly supports annual shareholders meeting and shareholder proposals, corporate governance, and other board of director issues. Developed and trained executives on new disclosure controls. Drafted and negotiated non-disclosure agreements, lines of credit, receivables, vendor and customer agreements, acquisition, divestiture and other M&A agreements. Directed legal team supporting worldwide sales organization and litigation. Addressed employee benefit issues.

## Crowdsourcing Token Distribution

### How do I buy BUZZ Tokens?

During the crowdsale, they are purchased by sending Ethereum to the smart contract address. Once received the smart contract will send tokens to your wallet.

After the crowdsale, BUZZ tokens will be traded on a still to be determined exchange and within smartphone applications that use the Redemption Technologies Platform.

### Total Number of BUZZ Tokens

We will create 225,000,000 BUZZ tokens. After the crowdsale, any tokens not sold or allocated will be burned forever. No additional BUZZ tokens will ever be created and the total amount in existence will continually decrease over time due to our buyback program.

### Commencement and Duration of Redemption Technologies, Inc. (BUZZ) Crowdsale

The Sale Period will begin on **September 11, 2017** at 1400 GMT and continue until either (a) 100,000 Ether are received, or (b) 4 weeks from ICO launch.

### BUZZ token pricing

The initial BUZZ token exchange rate will be based on a fixed ratio to ETH. Once the crowdsale is completed, the value of BUZZ tokens will be determined by supply and demand on the open markets. The initial exchange rate will be 1ETH = 1000 BUZZ + Bonus.

### BUZZ Tokens Retained by Company and Founders

The founders will own 30% of the initial BUZZ Tokens created. 50% of the tokens will vest after a period of 1 year. The remaining tokens will vest after the 2nd year. Redemption Technologies will burn any tokens not sold during the crowdsale.

## BUZZ TOKEN BONUS STRUCTURE

**1<sup>st</sup> week of ICO = 1ETH=1300 BUZZ Tokens (30% Bonus)**

**2<sup>nd</sup> week 1 ETH = 1250 BUZZ Tokens (25% Bonus)**

**3<sup>rd</sup> week 1 ETH = 1200 BUZZ Tokens (20% Bonus)**

**4<sup>th</sup> week 1ETH = 1100 BUZZ Tokens (10% Bonus)**

### Use of Proceeds from BUZZ Token Sale

The Ether raised during the crowdsourcing period will be used to complete development of the Redemption Technologies Platform, buildout of global sales and marketing partners, and finalize development for smartphones. Ether may also be used to further develop open sourcing tools and applications within the platform.

## ICO FUNDING ALLOCATION

- Software Development
- Android Integration Completion
- Sales and Marketing
- iOS Integration Completion
- Legal Fees
- Operations

## FAQs

### **What is a BUZZ token?**

BUZZ tokens are a new Blockchain based digital token based on the Ethereum technology and is ERC-20 compliant. The Redemption Technologies network will include user-generated smart tokens with the symbol BUZZ. The tokens will form a global decentralized marketplace with the ability for subscribers to redeem the tokens.

### **What amount is being raised?**

We are looking to raise a maximum of **100,000 ETH**. Once our goal has been achieved the crowdsale will end.

### **Is there an Escrow account?**

No. We already have an integration partner and a team of software engineers. The crowdsourcing funds will be used to advance our timeline to grow our existing business.

### **Will there be a follow-up offering?**

No. Due to the way we burn coins and decrease the number available, we will not have a follow up offer and no additional tokens will ever be created.

### **What crypto-currencies are accepted in the crowdsale?**

ETH is the only acceptable token. You will be required to have an Ethereum wallet pointed at the token/crowdsale address to participate in the initial sale. BUZZ tokens are Ethereum derived tokens and comply with ERC-20 standards. If you hold Bitcoin or some other crypto-currency, you can exchange it for ETH and use it to participate in the crowdsale. Please do not send coins from an exchange, or they may disappear.

### **What is the price of the BUZZ token?**

BUZZ tokens during the crowdsale will be on a fixed ratio to ETH. Once the crowdsale is completed, the value of BUZZ tokens will be determined by supply and demand on the open markets. The initial exchange rate will be 1ETH = 1000 BUZZ + Bonus.

### **Are BUZZ tokens transferable?**

Yes. Once the crowdsale ends we will have the BUZZ tokens open for trade on an exchange. The exact exchange has yet to be determined. BUZZ tokens will also be redeemable for products and services through Redemption Technologies global integration partners.

### **Are BUZZ tokens securities?**

BUZZ tokens are not securities, they are a token used to purchase discounted goods and services from partnered vendors. BUZZ tokens are non-refundable. BUZZ tokens are not for speculative investment. No promises of future performance or value are or will be made with respect to BUZZ, including no promise of inherent value, no promise of continuing payments, and no guarantee that BUZZ will hold any value. BUZZ tokens are not participation in the Company and BUZZ tokens hold no rights in said company. BUZZ tokens are sold as a functional good and all proceeds received by Company may be spent freely by Company absent any conditions. BUZZ tokens are intended for experts in dealing with cryptographic tokens and blockchain-based software systems. BUZZ tokens will be put on an exchange to allow liquidity for BUZZ token holders.

### **ICO Timeline**

Start Date: 1400 GMT **September 11,2017**

Duration: 30 days.

Conversion schedule: 1 ETH:1000 BUZZ + Bonus

Number of tokens available: 225,000,000

## Disclaimer:

As noted, BUZZ Tokens are not being structured or sold as securities or any other form of investment product. Accordingly, none of the information presented is intended to form the basis for any investment decision, and no specific recommendations are intended. Company expressly disclaims all responsibility for any direct or consequential loss or damage of any kind whatsoever arising directly or indirectly from: (i) reliance on any information contained in this White Paper, (ii) any error, omission or inaccuracy in any such information or (iii) any action resulting from such information. **US Citizens are not authorized to participate in this Crowdsale.**

## Bounty Campaign

Help raise awareness in the community by spreading positive news about Redemption Technologies and get rewarded with BUZZ tokens. Our bounty program will help us communicate with the community about the advantages of participating in the ICO. The more people who join the ICO discussion, the better liquidity will be when trading takes place after the ICO. To participate using:

### Twitter

Follow the Redemption Technologies twitter account AND Retweet content from our account to your public page with #BUZZ\_ICO

[https://twitter.com/Redemption\\_Tech](https://twitter.com/Redemption_Tech)

OR

### Facebook

Like + Follow the Redemption Technologies Facebook Page AND Share content to your public page with #BUZZ\_ICO <https://www.facebook.com/RedemptionTech>

OR

### Websites and Blogs

Write positive unique content about Redemption Technologies and post along with a link to <https://www.Redemption.Cloud> on your website or blog.

### Rewards

Redemption Technologies has allocated 1,000,000 tokens for the bounty program.

After posting content as instructed, please fill out our form here:

[https://www.redemption.cloud/mastermind/bounty\\_submit.html](https://www.redemption.cloud/mastermind/bounty_submit.html)

After the crowdsale has completed, all participants submissions will be validated. You will then receive an email with your reward. Respond with your wallet address to receive your rewards. Submissions will receive BUZZ tokens as a reward based on the amounts below.

You may earn up to 3 rewards per method.

You may post on Facebook, Twitter, websites, blogs and reddit and earn up to 3 rewards for each method.

**Twitter Rewards Amounts:**

With each unique approved retweet, you get the following amount of BUZZ tokens:

- From 100 to 500 followers - 5 BUZZ;
- From 500 to 999 followers - 10 BUZZ;
- From 1000 to 9999 followers - 20 BUZZ;
- 10,000 followers and more - 50 BUZZ;

**Facebook Rewards Amounts:**

With each unique approved share, you get the following amount of BUZZ tokens:

- From 200 to 500 friends - 5 BUZZ;
- From 500 to 999 friends - 10 BUZZ;
- From 1000 to 9999 friends and followers - 20 BUZZ;
- 10000 friends and followers and more - 40 BUZZ;

**Websites and Blogs Rewards Amounts:**

Articles and Forum posts that include positive promotional content will be rewarded based on the article content, where published and length of article. The amounts earned will be from 10-1000 BUZZ based on our opinion of the quality and value of the posting.

**Reddit Rewards Amounts:**

The amounts earned will be from 5-50 BUZZ based on our opinion of the quality and value of the posting.

**Glossary**

Android: is the mobile operating system developed by Google.

Ansible: An open-source automation engine that automates software provisioning, configuration management, and application deployment.

ASIC: Application-specific integrated circuit is an integrated circuit customized for a specialized use, rather than for general-purpose use.

Back end: Denotes a subordinate processor or program, not directly accessed by the user, which performs a specialized function.

Block: Where transaction data is permanently recorded into files, like a stock transaction ledger. Each block contains a timestamp and a link to a previous block. Blocks are organized into a linear sequence over time (also known as the blockchain).

BUZZ Token: ERC-20 token created to work on the Redemption Technologies platform.

**Blockchain:** A distributed database that is used to maintain a continuously growing list of records, called blocks. They are inherently resistant to modification of the data.

**Cryptocurrency:** A generally decentralized virtual currency in which encryption techniques are used to regulate the generation of units of currency and to verify the transfer of that digital currency, operating independently of a central regulatory authority.

**DDoS:** Distributed Denial of Service is a type of DOS attack where multiple compromised systems, which are often infected with a Trojan, are used to target a single system causing a Denial of Service (DoS) attack.

**Ecommerce:** The buying and selling of goods or services, or the transmitting of funds or data, over an electronic network (primarily the internet).

**ERC-20:** A token standard that describes the functions and events that an Ethereum token contracts should implement.

**Ethereum:** An open-source, public, blockchain-based distributed computer platform featuring smart contract (scripting) functionality, which facilitates online contractual agreements.

**Failover VPN:** Virtual private network tunnels that automatically and seamlessly failover to a backup external interface if a failure occurs, resulting in no downtime.

**Fiat currency:** Legal tender that is issued by a sovereign nation and supported in value by the full faith and credit of that nation. It is generally issued and regulated by the central government of that issuing nation. Fiat currency has the characteristics of being a store of value and a medium of exchange that retains value to purchase goods or services despite being used at a different time and in a different place from the original time and place of receipt.

**Front end:** The presentation layer between the user and the back end.

**ICO:** Initial coin offering is an unregulated means by which funds are raised for a new cryptocurrency ventures.

**iOS:** is the mobile operating system created and developed by Apple Inc. exclusively for its hardware.

**Masternode:** Servers that facilitate certain vital network functions of a cryptocurrency that uses them.

**MFA:** Multi-factor authentication is a method of computer access control in which a user is granted access only after successfully presenting several separate pieces of evidence to an authentication mechanism.

PoS: Proof-of-Stake is a type of algorithm by which a cryptocurrency blockchain network aims to achieve distributed consensus. The blockchain also encourages investors to accumulate and hold coins to prevent any individual or group from taking over by owning more than 50% of them.

ROI: Return on Investment measures the amount of return on an investment relative to the investment's cost.

Sign, signed: A digital signature that is a mathematical scheme for demonstrating the authenticity of digital messages or documents. A valid digital signature gives a recipient reason to believe that the message was created by a known sender, that the sender cannot deny having sent the message, and that the message was not altered in transit.

Terahash: 1,000,000,000,000 hashes, usually mentioned in the context of cryptocurrency mining equipment, as a number like 10 TH/s. Equipment can perform 10 trillion hashing operations per second.

Uptime: The measure of the time a computer/server/machine has been working and available.

VLAN: A group of devices on one or more LANs that are configured to communicate as if they were attached to the same wire, when in fact they are located on many different LAN segments. As VLANs are based on logical instead of physical connections, they are extremely flexible.

VPN: A virtual private network creates a secure, encrypted connection that extends a private network across a public network, and enables users to send and receive data across shared or public networks as if their computing devices were directly connected to the private network.

Wallet: A secure digital wallet used to store, send, and receive cryptocurrencies. Any Ethereum ERC-20 compatible wallet will work with BUZZ tokens.

### **Acknowledgements**

We would like to express our gratitude to the many developers, software engineers, and our phone app development teams. Without their dedication, support and feedback over the last 4 years this project would have not reached this milestone. Thank you.
