SkinPen[®]

by Bellus Medical

Collagen Induction Therapy for beautiful,
youthful looking skin.

What You Can Expect From Your SKINPEN® MICRONEEDLING PROCEDURE

- A comfortable experience.
- A short procedure time, approximately 30 minutes.
- A plan for optimal results.
- Mild post-procedure effects, similar to a mild to moderate sunburn.
- Effective on all body parts, including face, neck and décolletage.
- Safe for all skin types, light to dark.
- Ideal any time of the year.
- Little to no downtime.
- Beautiful, lasting results.

THE SKINPEN EXPERIENCE

Results For Truly Healthy Skin

As we age and battle skin conditions, the natural architecture of our skin deteriorates, which leads to fine lines, wrinkles, large pores and uneven skin texture. Collagen induction therapy, also known as microneedling, is a great way to address these signs of aging at the cellular level. Microneedling comfortably creates thousands of micro-injuries in the skin to trigger the body's natural wound healing process. This results in skin remodeling, including the formation of collagen and elastin, the two proteins predominantly responsible for the structure of the skin. The outcome is beautiful, youthful looking skin.

There is a difference and it's BLUE.

Bellus Medical raises the bar with SkinPen, the only U.S. engineered and manufactured microneedling device on the market with patent-pending, single use, sterile needle cartridges. Practices and patients now have peace of mind with a safe, superior device they can trust. Ask your provider today about the many benefits of microneedling with SkinPen.
