

iiShakers are salt and pepper shakers that feature a patented, revolutionary, smart technology that control an illumination system within each shaker depending on the shaker's motion and tipping angle. Glowing sidelights activate once the shaker is picked up, enhancing the dining experience. Top spotlights turn on when the shaker is sufficiently tipped for pouring so you can see the amount of salt and pepper being dispensed and exactly where it is landing. A built-in bottom flashlight is included when you need a little extra light. Finally, iiShakers include the LifeShaker Alert System that provides a visual notification for over salting by progressively changing the sidelights to amber and then to red. The Olitus Corporation which brings you the iiShakers is located in Bloomington, MN just outside Minneapolis.

iiShakers will be launched on Indiegogo on August xx, 2017 and will accept pre-orders at that time. Sign-up for deals and secret perks on <https://iishakers.com>.
