Making online poker profitable, fair, secure and greater than it has ever been before.

ACEBUSTERS. The decentralized poker economy.

Acebusters is a **decentralized poker platform** made by obsessive poker and cryptography fans. We strive to create Acebusters as a decentralized application (Dapp) which will offer the service of dealing cards and settling bets. The open and borderless nature of blockchain will allow players from all over the world to connect and create the largest poker liquidity pool seen to date.

THE PROBLEM: Current poker platforms suck.

Online poker should be thrilling, profitable and secure. Legacy poker platforms were not able to guarantee these factors and thus led to a downslide of the online poker economy. We identified some main problems of the traditional online poker platforms:

— *Player Deposit Risk*   — *Fraud by Poker Platforms*   — *Fragmented Liquidity*

OUR SOLUTION: Poker on the Ethereum blockchain.

Poker is only fun if it is also profitable for the players. We operate with a simple low-rake structure that is more profitable to recreational and professional players than rake structures of traditional platforms. Furthermore, we base our app on the Ethereum blockchain. The global reach of Ethereum will allow us to aggregate more players in **one global liquidity pool** than any existing platform. With **low-rake structures** and **high-profit games**.

+ *Global Liquidity Pool*   + *Low Rake Structure*   + *Security Of Funds*

+ *Fair Games*   + *Trustless Staking*   + *Privacy*
