SentinelSecure™ Intune C2 Workspace, SaaS version 3.0

Microsoft Intune Build: Secure and enhance your mobile Office 365 experience with SentinelSecure™, delivered from Microsoft Azure

For more than a decade, mobile employees have been working with one hand tied behind their backs. The productivity and bottom-line benefits mobility originally brought have been canceled out by overly-restrictive mobile security policies.

The SentinelSecure™ C2 Workspace (containerized & collaborative) removes those limitations, enabling unrestricted, unimpeded, and totally secure collaboration between mobile employees and their enterprise ecosystem. The C2 Workspace is protected through a FIPS 140-2 compliant, AES 256-bit encrypted application container.

The SentinelSecure™ containerized & collaborative or C2 Workspace secures data and apps on the device with a NIST-certified, AES 256-bit encrypted connection to your datacenter. For securing your mobile Office 365 or other enterprise app experience, there's not a more cost-effective solution than SentinelSecure™.

SentinelSecure™ 3.0 now available in a SaaS model.

SECURE.SYSTEMS

- Containerized, encrypted, NIST-validated security
- Quick, easy deployment as managed service
- Integrated with Microsoft Office 365
- Integrated with Microsoft Intune EMM, plus others
- Simple, subscription-based payment model
- Ability to easily upgrade or downgrade subscription
