## Preventance BI - APT's Business Intelligence & Data Visualization software application

Preventance BI is an exciting new, low cost and easy to use software application that enables APT customers with analytics and visualization capabilities to turn your data into actionable information. Business intelligence is all about leveraging your data to gain insights and continuously maximize asset performance, understand risk, and control cost.

Preventance BI enables customers to:

- Monitor and report on equipment performance and maintenance strategy costs at a level of detail that empowers effective cost and risk management decisions
- Use cost data in conjunction with equipment performance data when determining the acceptability of maintenance strategy effectiveness and risk profiles
- Monitor the effectiveness of maintenance strategy changes
- When used in conjunction with APT's Preventance APM platform, clients can seamlessly access actual cost and performance data to develop or modify existing maintenance strategies to achieve required levels of equipment reliability at the lowest cost
- Create dashboards for effective monitoring and management reporting

Preventance BI is a simple but effective way to visualize and trend data over time, enabling users to monitor and identify improvement opportunities within their asset strategies. With its powerful yet simple user interface, users can quickly configure reports and dashboards of top KPIs to meet executive and compliance reporting requirements.
