atmail suite on-premises

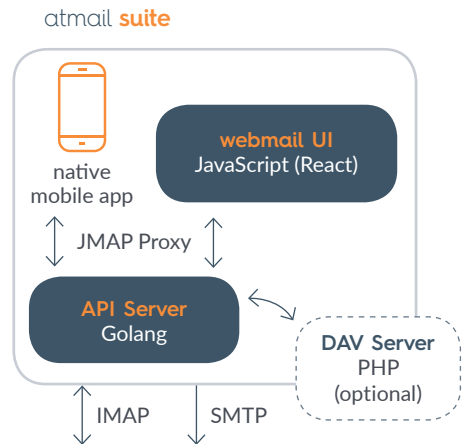

atmail suite comprises version 8 of our webmail interface, an API Server, a DAV server and a native app for iOS (android coming soon), representing a complete technology redesign for our webmail product. The responsive, intuitive UI has been developed to the latest standards in user-experience design and browser technology. This pairing of modern architectures and design methodologies results in an incredibly intuitive and fast email experience.

Private & secure:

- Your customers can download the atmail app from the Apple App Store (Google Play coming soon) and connect to the API server you host on-premises.
- atmail suite has passed audit scans for hundreds of vulnerabilities and threats, including viruses, worms, cross-site request forgery and injection attacks (including the OWASP Top 10).

Modular, scalable & low resource footprint

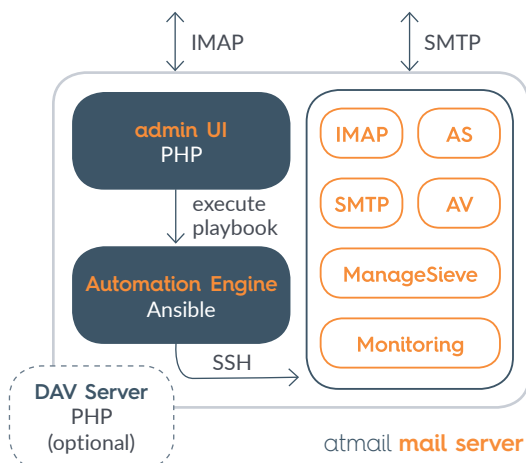

- **Front-end**
 - A single page app (SPA) providing a desktop-like application experience
 - Utilises client-side processing to further reduce server load
 - Web server needs only to serve static files
 - Analytics tracking
- **API**
 - Highly performant compiled binary (Golang) – no code interpretation
 - Extensive configuration options
 - True API server only returning JSON data
 - Takes advantage of your investment in IMAP infrastructure
- Modular design allows scaling the front-end and API independently
- Supports software load balancing with nginx and haproxy

atmail mail server on-premises

Our **mail server** redefines the delivery of atmail's core services providing a highly modular and scalable solution for mass installations, leveraging an automation engine to increase the ease and simplicity of the deployment and configuration of IMAP, SMTP, ManageSieve, Monitoring, AV and AS servers on demand.

When paired with the atmail suite, the full stack allows for incredibly easy domain management (users, settings, groups, domains, aliases and branding per domain).

atmail cloud

Alternatively, you can subscribe to the **atmail cloud**, where our experienced technical team hosts and manages the atmail suite and mail server for you. Leverage best-of-breed technologies and our specialist expertise to simplify your email management, so you can focus on your business and not your infrastructure.

- Choice of data centres ensuring you meet privacy regulations and reduce latency
- The latest in spam management and threat mitigation
- Migration planning and provisioning
- Access at any time, from any device
- In-house support available in real time, 365 days a year
- Dynamic storage and scaling, allocated as you need it
- Robust and reliable service with proven uptime
- Lower overheads for infrastructure and maintenance

Please Note: The atmail DAV server is an optional plugin for either the atmail suite or the atmail mail server. If deployed, it is deployed with either product but not both.

Fully featured; email, contacts, calendars, desktop, tablet and mobile

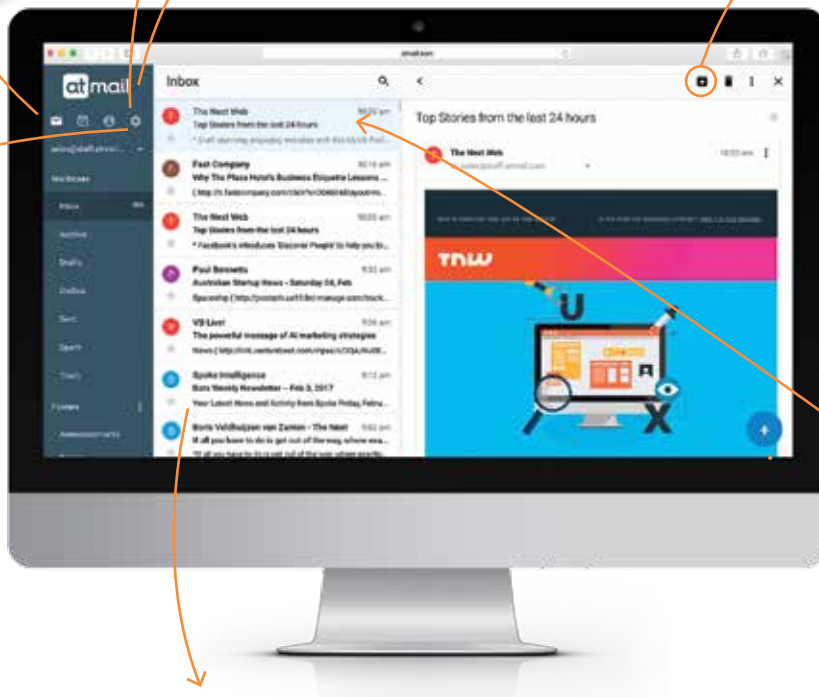

Multiple accounts; add your Gmail/Google Apps or other IMAP accounts for seamless integration

White labelled; your domain, your brand. Simply upload your logo and select your colour palette

One-click archiving; quickly manage your email and achieve 'inbox zero'

Live updating & synchronisation; your email, contacts and calendars synchronise and update in real time, across all devices

Multiple locale support; six languages, 'out-of-the-box', all professionally translated

Lazy loading; your emails and contacts load on demand as you scroll

atmail road map
