Miller Ingenuity to Equip Maryland Transit Administration with 'ZoneGuard' - Roadway Worker Protection System

WINONA, MN – Miller Ingenuity, a rail product manufacturer focused on revolutionizing traditional safety solutions for railway workers, has entered into a collaborative agreement with the Maryland Department of Transportation (MDOT) to install ZoneGuard, Miller's award-winning electronic roadway worker protection system, on the Maryland Transit Administration's (MTA) Baltimore light rail lines.

"Our number one mission is to bring these men and women home to their families at the end of the day," said Steve Blue, President and CEO of Miller Ingenuity. "We have engineered ZoneGuard to coincide with existing safety rules and exceed FRA safety recommendations and regulations. The ZoneGuard design incorporates requirements from literally dozens of customer discussions, many of whom have already implemented legacy solutions and are demanding better performance. We focused our development on eliminating false alerts, superior performance in all rail-related environments, and offer fail-safe features including sensor redundancy."

The ZoneGuard system provides various options, including a combination of Train Detection Modules (TDM) and Train Alert Modules (TAM). The system's modules are set up to create a robust communication network that is triggered once a track vehicle is detected approaching an on-track worker or work crew. The train detection and communication network architecture provide highly accurate warning times when detecting track vehicles, eliminating costly false alerts commonly found in similar systems in the industry. ZoneGuard can also be outfitted with wearable devices – one configured for the watchman/lookout, one for the roadway-worker-in-charge (RWIC), and one for each crew member – that will provide equipped workers with an alert of the impending train approach.

For more information on ZoneGuard or to schedule a demo, contact Kevin Smith, SVP of Global Sales and Marketing at sales@milleringenuity.com.

ABOUT MILLER INGENUITY

Miller Ingenuity, a manufacturing company based in Winona, MN, is a global supplier of lifesaving, high-technology safety systems and services that surpass rail-safety standards. For more than 65 years, the organization has demonstrated the ability to conceptualize, design, produce and deliver railroad parts that meet the current and emerging needs of the industry. For more information, visit www.milleringenuity.com or follow Miller on Twitter @MillerIngenuity.
