

Shield Security Cockpit

Analyzer for Salesforce Shield Platform Encryption

Key Benefits

Reduce maintenance and audit time up to 80%

Instantly see the encryption status of all fields accurately in real-time

Export encryption status reports for InfoSec any time and with confidence

Keep up to date with changes to your org & Salesforce releases

Use Cases

Shield Implementation

Know which fields can and can't be encrypted. Know which fields require mitigation and why.

Encryption Maintenance & Audits

Quickly and easily ensure regulatory compliance (e.g. HIPAA, SOX) with Shield.

The manual process of understanding which fields can't be encrypted and why is very time intensive.

Streamline this process with RevCult's Shield Security Cockpit by quickly identifying which fields:

Are ready for encryption

Require mitigation and where to fix these issues

Can't be encrypted based on Salesforce rule set

Are already encrypted by Salesforce Shield

F

Glossary

- All Clear:** These fields can be encrypted right away if desired
- Blocked by Configuration:** These fields do not comply with the Salesforce.com rules, but there are possible mitigation steps that can be taken to allow encryption
- Blocked by Platform:** These fields do not comply with the Salesforce.com rules, and it is not possible at this time to encrypt them
- Encrypted by Shield:** These fields are encrypted by Salesforce Shield Platform Encryption

B Advanced Filter

Quickly navigate your Objects and Fields to streamline data classification.

C Download Encryption Status Results (CSV)

Export reports for InfoSec on your encryption status.

A	B	C	D	E	F
Object Name	Field Name	Api Name	Data Type	Status	Reason Blocked
Account	Description	Long Text Area(32000)	Clear	All clear to encrypt.	
Account	Fax	Phone	Clear	All clear to encrypt.	
Account	Name	Text(255)	Clear	All clear to encrypt.	
Account	AccountNumber	Text(40)	Platform	The platform does not allow the encryption of this standard field	

D Summary of Current Status of Selected Fields

See glossary for status definitions.

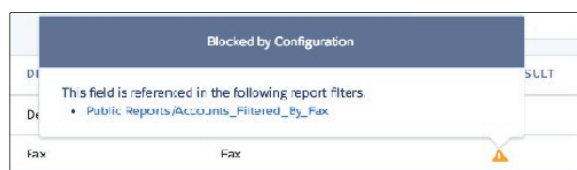

All Clear	Blocked By Configuration	Blocked by Platform	Encrypted by Shield
25	9	42%	2

E Field Explorer

Find and select your Objects and Fields. The field explorer can be used as an enabler/discovery tool for the data classification conversation. Simply check the box next to each field you'd like to analyze.

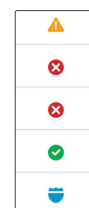

G Field Result Details

Hover over icon for details on why a result was determined. If the field was blocked by configuration, a link is provided, directing the user to where the field is referenced. This allows the user to determine what configuration changes are required to encrypt a field without negative impact.

F Field Specific Results

When the analysis is completed, the fields you selected in Field Explorer will show you the status for each field. See glossary for status definitions.
