

FOR IMMEDIATE RELEASE – PRESS RELEASE

**Computer Support Services, Inc. Announces Name Change and Divestment of CoreIntegrator Workflow Software**

*Jan. 2, 2018 – Lewisburg, PA*

Computer Support Services, Inc. announces that it has officially changed its name to CSSI Technologies, Inc. Simultaneously, the business announces that CoreIntegrator, its leading workflow and document management software product, will now operate as an independent company, CoreIntegrator, LLC.

According to CSSI Technologies CEO Dave Cornelius, “We have seen tremendous growth in our business in recent years, including our CoreIntegrator operating division. I believe that the time is ideal to separate into independent businesses to better execute the strategy and serve the customers of each entity. Our new name, CSSI Technologies, better reflects our expertise in barcoding, data acquisition, mobile computing and custom programming technologies.”

Since its founding in 1973 in Lewisburg, Pennsylvania, CSSI Technologies has specialized in applying constantly evolving computer technologies to solve business problems. The company supports customers in manufacturing, distribution and delivery/logistics with data acquisition technologies such as barcoding and RFID, custom software development, and support for Microsoft’s market-leading ERP software Dynamics GP.

In the late 1990’s, CSSI Technologies developed CoreIntegrator as a link between Great Plains accounting software and a nationally known content management system. CoreIntegrator has since evolved to include workflow, document management, integrations to many ERP solutions, advanced scanning and more. “CoreIntegrator has consistently grown as a premier list of clients have discovered the benefits of our workflow solution”, said CoreIntegrator CEO Tom Erickson. “Now, as an independent business wholly focused on this product line, we will be better able to execute our strategy.”

Mr. Cornelius remains CEO of CSSI Technologies, with Joe Tosolt serving as President. Mr. Erickson will assume the CEO role for CoreIntegrator, LLC. Both companies are headquartered in Lewisburg, Pennsylvania.

*About CSSI Technologies, Inc:*

CSSI Technologies ([www.cssi.com](http://www.cssi.com)) works with customers in manufacturing, distribution and delivery environments to improve profit and productivity through the smart integration of mobile computing and data acquisition technologies such as barcoding and RFID. CSSI also offers custom software development and support for the popular ERP software Microsoft Dynamics GP.

*About CoreIntegrator, LLC:*

Since the late 1990’s, CoreIntegrator Workflow ([www.coreintegrator.com](http://www.coreintegrator.com)) has been a leading software platform for Accounts Payable and Business Process Automation solutions. The versatility and ability to ‘Automate Virtually Any Business Process’ has allowed CoreIntegrator Workflow to be used globally by thousands of users in both large and small organizations in almost every industry. Formerly an operating division of Computer Support Services, Inc, CoreIntegrator, LLC is now an independent company focusing on delivering the best possible service and support to our customers while providing a software solution that truly makes a difference in the day to day life of our customers.
