

US Special Operators originally came to us with a problem:

They were getting many video streams (from unmanned aerial systems, action cameras, robots, and FLIR) but could not share them in a simple, easy way.

KOPIS MOBILE LISTENED

NETWORKED TACTICAL TELEVISION

SHARE TACTICAL VIDEO:

- ▶ Portable, scalable, low cost video sharing system
- ▶ Connect multiple camera types with many smart phones and tablets at the same time
- ▶ Use existing (and emerging) tactical equipment to share information and improve situational awareness
- ▶ Record up to 30 hours of video internally, expandable externally

AND MAKE A DIFFERENCE:

- ▶ Increase team situational awareness
- ▶ Improve training retention
- ▶ Lower training costs
- ▶ Collect evidence easily

Seek, pause, rewind, and skip through recordings

Kopis Mobile, in partnership with the Combating Terrorism Technical Support Office and the Domestic Preparedness Support Initiative, strives to give our first responders every advantage over those who wish to do us harm.

INTRODUCING THE WORLD'S FIRST MOBILE VIDEO MANAGEMENT SYSTEM

View and download time-synchronized recordings from the NTtv system

Increase training effectiveness,
be more efficient, and take back
the advantage, **NOW!**

MvDVR

MULTIPLE VIDEO DVR

Better training results in better preparedness. Often the difference between success and failure boils down to synchronized seconds on the scene. The only way to achieve success is through constant, persistent, and efficient training. The mvDVR helps your unit reach this goal.

Playback up to four time-synchronized recordings at once

FULLY INTEGRATED WITH THE HIGHLY SUCCESSFUL NTV VIDEO DISTRIBUTION PLATFORM

The multiple video DVR (mvDVR) system is a feature that adds the ability to quickly review mission or training action – using multiple video recordings in a manner similar to a home DVR.

MvDVR combines rugged electronics and software designed to provide a cost-effective platform for military and first responders to effectively share video amongst team members and leaders.

SIGNIFICANTLY REDUCE TRAINING TIME

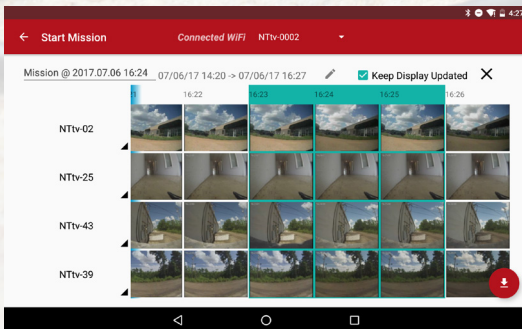

- ▶ Time-synchronizes all video recordings
- ▶ Uses simple step-by-step "wizard" interface
- ▶ Stores time-stamped metadata alongside recordings, including user tags and geo-locations

SIMULTANEOUSLY DOWNLOAD AND SYNCHRONIZE MULTIPLE VIDEO RECORDINGS FROM MULTIPLE CAMERA SOURCES

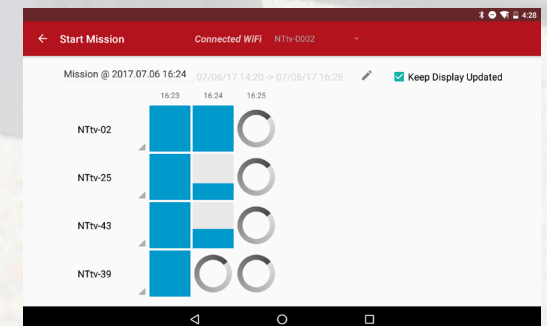

For the first time, tactical leaders and trainers have total control over their video recordings. No longer do they have to wait an excessive amount of time to download video from individual cameras or stuff team members into a cramped video control room to review actions on the objective.

SIMPLIFY HOW VIDEO REVIEW IS CURRENTLY DONE

- ▶ Provides the user the ability to seek forward and backward during the review process to skip or re-watch specific times of the recordings
- ▶ Allows the user the ability to review up to four video recordings inside the user-specified time window
- ▶ System supports an export feature, allowing the user to backup and/or move the recordings and metadata to another computer and/or application

Select a time range of interest and mvDVR will download the recordings and begin playback

MvDVR automatically downloads each recording in the time range
