## DISCLAIMER

**Important Risks:** *Bonds offer a relatively stable level of income, although bond prices will fluctuate providing the potential for principal gain or loss. Intermediate-term, higher quality bonds generally offer less risk than longer term bonds and a lower rate of return. Generally, a fund's fixed income securities will decrease in value if interest rates rise and vice versa. Mortgage-backed investments involve risk of loss due to prepayments and, like any bond, due to default. Because the sensitivity of mortgage-related securities to changes in interest rates, a fund's performance may be more volatile than if it did not hold these securities.*

Foreign Investments can be riskier than U.S. investments. Potential risks include currency risk that may result from unfavorable exchange rates, liquidity risk if decreased demand for a security makes it difficult to sell at a desired price, and risks that stem from substantially lower trading volume on foreign markets. These risks are generally greater for investments in emerging markets, which are also subject to greater price volatility, and custodial and regulatory risks.
