

## ENVIRONMENTAL PRODUCT DECLARATION

# VDS FRAMING

VETROTECH – VDS BY FORSTER FRAMING SYSTEM

VDS Framing by Forster is a narrow style framing system that meets fire ratings of 60 minutes. This fully insulated option provides architects with modern design opportunities where a fire rating is required.

PRESERVING THE FUTURE  
FOR ALL

We take our environmental responsibilities very seriously. We offer our customers complete assurance that Vetrotech's glass solutions meet internationally recognized environmental standards at every stage of their life cycles. Our solutions contribute to building occupants' comfort and safety. We help your projects gain points for sustainable building labels such as LEED, BREEM, Green Globes and others.

Saint-Gobain is the worldwide leader in sustainable habitat. We continue our efforts to reduce the environmental impacts of production and use of our products through responsible development of sustainable building products and systems.

# ENVIRONMENTAL PRODUCT DECLARATION

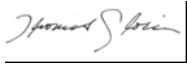

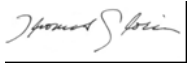

VDS Framing by Forster  
Fire Rated Steel Framing System

According to ISO 14025 and EN 15804

This declaration is an environmental product declaration (EPD) in accordance with ISO 14025 and EN 15804. EPDs rely on Life Cycle Assessment (LCA) to provide information on a number of environmental impacts of products over their life cycle. Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc. Accuracy of Results: EPDs regularly rely on estimations of impacts, and the level of accuracy in estimation of effect differs for any particular product line and reported impact. Comparability: EPDs are not comparative assertions and are either not comparable or have limited comparability when they cover different life cycle stages, are based on different product category rules or are missing relevant environmental impacts. EPDs from different programs may not be comparable.

PROGRAM OPERATOR	UL Environment	
DECLARATION HOLDER	Vetrotech Saint-Gobain	
DECLARATION NUMBER	4788170061.102.1	
DECLARED PRODUCT	VDS Framing– VDS by Forster Framing System	
REFERENCE PCR	Environdec PCR for Construction Products and Construction Services: V. 2.2 (2015)	
DATE OF ISSUE	February 15, 2018	
PERIOD OF VALIDITY	5 Years	
CONTENTS OF THE DECLARATION	Product definition and information about building physics Information about basic material and the material's origin Description of the product's manufacture Indication of product processing Information about the in-use conditions Life cycle assessment results Testing results and verifications	
The PCR review was conducted by:	The International EPD System	
	Prepared by: Swedish Environmental Research Institute	
	Martin Erlandsson, martin.erlandsson@ivl.se	
This declaration was independently verified in accordance with ISO 14025 by Underwriters Laboratories <input type="checkbox"/> INTERNAL <input checked="" type="checkbox"/> EXTERNAL	 Grant R. Martin, UL Environment

Fire Rated Steel Framing System

According to ISO 14025 and EN 15804

## Product Documentation

### Product Description

Engineered steel window or door frames to provide a fire-resistive or fire-protective framing solution with complete design flexibility. Frames are custom sized according to building specifications, including a steel profile with insulation, coating, and gasket for the glazing.

The VDS Framing by Forster Framing Systems weighs 8.21 kg/m. They are typically used with the Vetrotech Contraflam Fire Rated Safety Glass, which also has a separate EPD.

#### Features and Benefits

- Fire ratings of 60 minutes
- Easy to assemble
- UL Certified in US and Canada
- Fabricated in the US

VDS Framing by Forster Framing Systems are certified to ASTM E119, Standard Test Methods for Fire Tests of Building Construction and Materials; UL 263, Standard for Fire Tests of Building Construction and Materials; NFPA 80, Standard for Fire Doors and Other Opening Protectives; NFPA 252, Standard Methods of Fire Tests of Door Assemblies; NFPA 257, Standard on Fire Test for Window and Glass Block Assemblies; and CAN/ULC S101, Standard Method of Fire Enurance Tests of Bulding Construction and Materials.

Fire Rated Steel Framing System

According to ISO 14025 and EN 15804

## Manufacturing Location

The manufacturing facilities involved in the production of the VDS Framing by Forster Framing System are:

<i>Manufacture of the steel profile:</i> Forster Profilsysteme AG Industriestrasse 24 Postfach Arbon, Switzerland	<i>Fabrication of the framing system:</i> Vetrotech Saint-Gobain 2108 B Street, NW Suite 110 Auburn, Washington
---	---

## Applications and Uses

VDS Framing by Forster Framing Systems are for commercial use. The products are used to hold or support glass panels, either as windows or doors.

## Material Inputs

VDS Framing by Forster Framing System		
Component	Percent of Component	Percent of Final Product
<b>Steel Profile</b> (Forster Fuego Light profile)		74.4%
<i>Hot Dipped Galvanized Steel</i>	48%	
<i>Stainless Steel</i>	9%	
<i>Gypsum Board</i>	42%	
<i>Foam Insulation</i>	1%	
<b>Rubber Gasket</b>		12.1%
<b>Steel Bead</b>		8.4%
<b>Paint</b>		5.0%
<b>Putty</b>		0.1%

## Manufacturing Process

VDS Framing by Forster Framing Systems are fabricated at the Auburn, WA facility and this is the only Saint-Gobain facility to produce the VDS Framing by Forster products. The steel profile portion of the product is manufactured by the Forster company in Arbon, Switzerland where large rolls of steel sheets are processed through various forming operations to create the steel profiles and the gypsum board and insulation are added. The profiles are then cut into 6 meter lengths and shipped to the Vetrotech Saint-Gobain Auburn, WA facility for fabrication.

After the steel profiles from Forster arrive at the Vetrotech facility, they are cut and welded according to the order or builder specifications for the frame size. The welded frame is then prepped for paint and sanded with sandpaper to allow better adhering of the paint to the steel surface. Paint is then applied and dried in a natural gas heated oven. Gaskets necessary for the installation of the glass panels is applied before the product is packaged for shipping to the construction site.

## LCA Calculation Rules

### Declared Unit

The declared unit for this study is one meter (1 m) of framing.

### System Boundary

The life cycle analysis performed for this EPD includes “cradle-to-gate with options” life cycle stages. The system boundary includes raw material supply, manufacture, and transport; the VDS Framing fabrication at the Auburn, WA facility; packaging; transport to the construction site; and installation.

Description of the System Boundary (x=included; MND=module not declared)																
Product Stage			Construction Process Stage		Use Stage							End of Life Stage				Benefits & Loads Beyond System Boundaries
Raw Material Supply	Transport	Manufacturing	Transport from the gate to the site	Assembly	Use	Maintenance	Repair	Replacement	Refurbishment	Operational Energy Use	Operational Water Use	De-construction/Demolition	Transport	Waste Processing	Disposal	Reuse-Recover-Recycling Potential
A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D
X	X	X	X	X	MND	MND	MND	MND	MND	MND	MND	MND	X	X	X	MND

Table 2: VDS Framing by Forster Framing System Description of the System Boundary

### Estimates and Assumptions

Life cycle analysis requires that assumptions are made to constrain the project boundary or model processes when little to no data is available. Key assumptions made for this study of the VDS Framing by Forster Framing System include the paint mixture of primer, top coat, and catalyst; the disposition of the manufacture waste for recycle and landfill; the final product transportation; the amount and weight of additional installation materials; and the disposition of the end of life waste for recycle and landfill.

---

## Cut-off Criteria

Processes whose total contribution to the final result, with respect to their mass and in relation to all considered impact categories, is less than 1% can be neglected. The sum of the neglected processes may not exceed 5% by mass of the considered impact categories. The life cycle analysis performed for this EPD is in compliance with the cut-off criteria since no known processes were neglected or excluded from the analysis.

---

## Background Data

SimaPro v8.1 software was used for modeling the life cycle of the VDS Framing by Forster Framing System product. Each background dataset used was taken from the SimaPro databases, Ecoinvent v3, US-Ecoinvent 2.2, and US LCI.

---

## Data Quality

Wherever secondary data is used, the study adopts critically reviewed data for consistency, precision, and reproducibility to limit uncertainty. The data sources used are complete and representative of Europe and North America (depending on the material source) in terms of the geographic and technological coverage and are less than ten years old. Any deviations from these initial data quality requirements for secondary data are documented in the report. Overall, the primary data from the manufacturing location is of good quality, being directly tracked and measured by facility personnel. Secondary data sets are of fair-to-good quality.

---

## Period Under Review

Data for the LCA performed for this EPD was collected for the 2016 calendar year.

---

## Allocation

The Auburn, WA facility is the only location in the United States that produces VDS Framing by Forster Framing Systems. However, the Auburn, WA facility also produces other products with differing impacts, so allocation was determined on the production mass data with input from process experts at the facility.

---

## Comparability

Comparison of the environmental performance of construction products using EPD information is only possible if the EPDs were created in accordance with the EN 15804 standard and the building context and product specific characteristics are taken into account.

## Technical Information

### Transport to the Construction Site

Transport to the Construction Site		
Parameter	Units	Value
Vehicle type used for transport	-	Long distance truck
Vehicle load capacity	kg per vehicle	20,412
Fuel type and consumption	Liter of fuel type per distance	39 liters of diesel per 100 km
Distance to construction site	km	3321
Capacity utilization (including empty runs)	%	100
Bulk density of transported products	kg/m <sup>3</sup>	~8000

Table 3: VDS Framing by Forster Framing System Transport to the Construction Site

### Installation of the Product

Installation of the Product		
Parameter	Units	Value
Ancillary materials for installation	kg	0.284
Water use	m <sup>3</sup>	0
Other resource use	kg	0
Quantitative description of energy type and consumption during the preparation and installation process	kWh	190.496
Direct emissions to ambient air, soil, and water	kg	0
Waste materials on the building site, generated by the product's installation, specified by type	kg (packaging waste to landfill)	4.656
Output materials (specified by type) as result of waste processing at the construction site	kg	0
Vehicle type used for transport specified for all waste and output materials types	-	Refuse truck
Vehicle load capacity	kg	9000
Fuel type and consumption	Liter of fuel type per	1.8 liters of diesel per km
Distance to construction site	kg	161
Capacity utilization (including empty runs)	%	-
Bulk density of transported products	kg/m <sup>3</sup>	-

## LCA Results and Interpretation

### Environmental Impact Potentials

The environmental impact potentials listed below were assessed through the cradle-to-gate with options life cycle of the VDS Framing by Forster Framing System products, including raw materials, manufacture, packaging, final product shipping, installation, and end of life as defined above. The results are shown for both a North American context using the TRACI 2.1 Impact Assessment Method and a Rest of World context using the CML 4.1 Impact Assessment Method.

TRACI 2.1 Environmental Impact Potentials								
Impact Category	Unit	Raw Materials (including transportation)	Manufacture	Packaging	Final Product Shipping	Installation	End of Life	Total
Global Warming Potential (GWP-T)	kg CO2 eq.	2.19E+01	1.48E+01	2.65E+00	2.53E+00	1.51E+00	1.76E-01	4.36E+01
Ozone Depletion Potential (ODP-T)	kg CFC-11 eq.	2.76E-06	3.07E-07	6.58E-08	9.64E-11	2.80E-08	5.81E-09	3.16E-06
Acidification Potential (AP-T)	kg SO2 eq.	1.69E-01	1.24E-01	1.25E-02	1.51E-02	1.59E-02	1.26E-03	3.37E-01
Eutrophication Potential (EP-T)	kg N eq.	9.45E-02	1.96E-02	2.94E-03	8.41E-04	2.56E-03	8.37E-05	1.20E-01
Photochemical Ozone Creation Potential (POCP-T)	kg O3 eq.	1.76E+00	1.04E+00	2.36E-01	4.13E-01	4.70E-01	3.49E-02	3.95E+00
Abiotic Resource Depletion Potential (ADP-T)	MJ	3.30E+01	1.53E+01	5.37E+00	4.84E+00	2.54E+00	3.96E-01	6.15E+01
