Sendoso + SurveyMonkey

Automate reward fulfillment for survey respondents. Automatically send eGift cards, physical swag, or gifts as rewards and incentives.
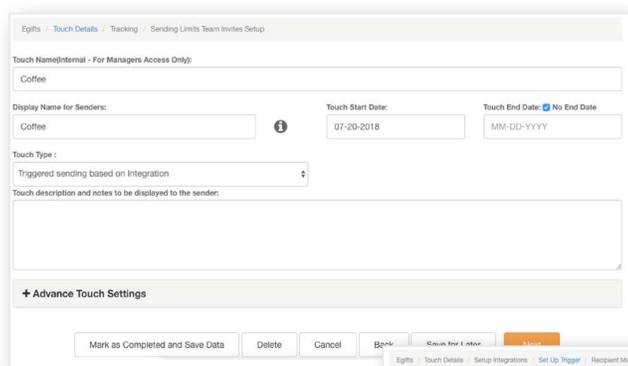

How It Works

- Download the "Sendoso" app from the SurveyMonkey App Directory
- In Sendoso, create a new eGift Touch (Coffee, Lunch, eGift Cards USA, etc.)
- Under the Touch Type in Step 2 of Touch creation, select "Triggered sending based on integration"
- Sync your SurveyMonkey Account and click "Allow" on the popup to connect your Sendoso account to your SurveyMonkey account.
- Select the Survey Name and the related question that will ask for a valid email address in order to receive the eGift.

- Click "Next" in order to complete the remaining steps and finalize the Touch.
- That's it!

Now, when a submission is placed, the eGift will be sent to the email address entered in the Survey email field that was already assigned.
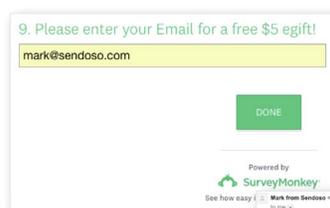

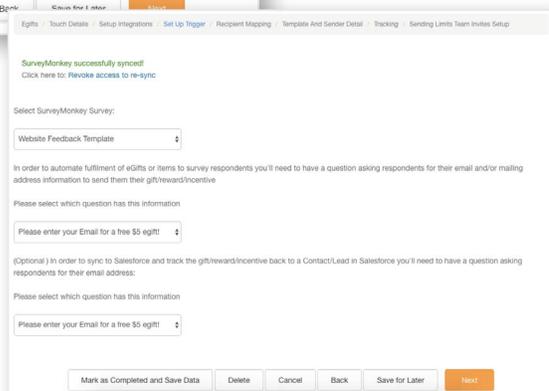

How To Get The Most Out Of It

- Add a simple question or prompt to the end of your survey to collect emails and reward survey-takers.
- Leverage direct mail, gifts, and eGifts to build brand advocates, engage prospects, and nurture happy customers.

In Sendoso, create the new eGift touch and select "triggered based on integration" and choose "SurveyMonkey."

SurveyMonkey is successfully synced and select the following fields.

The email that the survey respondent will receive!
