

TrueSentry
True Control. True Security.
True Coordination.

InterAct
PUBLIC SAFETY SYSTEMS
Making Connections for Life.

There's a lot more to security than meets the eye.

TrueSentry is an advanced surveillance and security management platform that ties your security resources together for effective threat detection and proactively pushes this information out to your response teams. It is built on an open and scalable architecture with over 10 years of experience in managing large distributed camera networks. The TrueSentry video surveillance system protects people, facilities and assets using both analog and digital cameras, in fixed and mobile applications.

View Incident Video and Control Live Cameras From Anywhere

With TrueSentry, it's possible for you to virtually be in more than one place at one time. Our digital video surveillance system offers secure remote video and camera access so you can view video associated with an alarm from a remote location. You can also control the pan/tilt/zoom of your cameras to see what is happening on-site LIVE from one central Windows-based interface, regardless of the geographic distance between them. With our Web-based interface, you can even view live camera feeds from anywhere in the world.

Our Video Proxy and Mobile Clients allows you to invite an unlimited number of users (internal or external to your organization) to view video content and manipulate live cameras remotely without interrupting the regular operations of your system. TrueSentry also supports Video Wall integration for Command Center monitoring.

Sensor and Device Integration

TrueSentry provides centralized access to distributed resources like control systems, fire sensors, door sensors and more. Integration with your entire security system is essential for managing large-scale camera networks across geographically dispersed locations. The device scales to thousands of cameras on a network managed by TrueSentry. Administrators can monitor camera status, health, and performance in real-time from a single console.

TrueSentry

True Control. True Security. True Coordination.

Proactive Response Team Coordination

When an emergency occurs, you need reliable collaboration tools that allow you to quickly mobilize a response. With TrueSentry, it's possible to view an incident in real-time, escalate an alert that will reach your team in an instant, and even send images to law enforcement officers in the field.

Designed specifically with public safety and homeland security in mind, TrueSentry's unique system features will help you detect threats and assemble an intervention team quicker and more efficiently than any other digital video surveillance product. With automatic and intelligent alert detection, video analysis, crisis notification and management, security dispatch, and the unique ability to integrate with government and law enforcement databases, TrueSentry surpasses the functionality of all other alarm monitoring systems.

It is the only video surveillance system integrated with the same computer-aided dispatch (CAD) and geographic mapping systems used in 911 dispatch centers. Now you can use this same sophisticated technology to dispatch your own security teams. With a click of your mouse, you can initiate a dispatch request and your field personnel by actually sending them a video snapshot so that they will be up to speed on the situation before they even arrive on the scene.

Tight integration with a sophisticated Web-based emergency notification and crisis management system, MissionMode, gives your response teams the ability to easily share information, send alert notifications, and respond to an incident.

Maximize Your Resources

Inevitably you are limited by the amount of space your server provides for data storage. TrueSentry lets you set how the system prioritizes video archive storage so the system can automatically delete non-alarm data before others video archives. TrueSentry's advanced video storage solution also saves limited server space by speeding up streaming speeds for better video quality only in the instance of a triggered alert.

As your needs increase, TrueSentry can grow to meet the challenge. Our system supports over 80 cameras and can connect to a heterogeneous mixture of IP- based cameras, analog cameras, NVRs and DVRs, as well as other sensors and access control systems for broad, consolidated monitoring, seamless administration, and uninterrupted live video streaming.
