Hole MOA06 - 020 Sulphide Intersection

Stringers and banded **sphalerite -chalcopyrite and pyrite** in altered, medium grey rhyolite - intersection shown in first row is ~297 m.

Mineralization becomes dominantly **chalcopyrite-pyrite** by 298m, as is visible in second row.

S. Carlor

By third row mineralization is dominated by **sphalerite**, with lesser chalcopyritepyrite. Intersection shown ends ~ 300m (see below).
