[Summary's at end of Report](#)

How do I create a summary at the end of a report. I would like to sum up :Active,Inactive, and Total of Active/Inactive

[Importing a non-TeamTrack table](#)

I have a non-TeamTrack table that tracks a list of items. This table is updated automatically by a source other than TeamTrack. I have a requirement to show the contents of that table in TeamTrack and be able to relate items (or create lists) from that table to items that exist in a solution in...

[Checking for a null value in a notification rule](#)

Does anybody know how to check to see if a field has a value in a notification rule? The field that I'm working with is numeric and nothing I've tried works. I finally wrote out the value when the field was blank in a script and got a number over 2 billion. Does anybody know what this number...

[Relational field list active only...](#)

I have an aux. table called Project Name. In the table we have all of our projects and a field for Active or Inactive. The active field is a check box. In a primary table I want to list just the active projects. Does anyone know how to do this?

[Ownership and su-relational field](#)

Hi,I'm setting up a new workflow, this workflow is associated to an auxiliary table, which contain a user field. In my primary table, I have a single relational field to the auxiliary table and a sub-relational field which is the user field of the auxiliary table.Is this feasible to give the...
