

My Dream Home Registry Owner Bio's

Kristin Lee Hannah

Kristin Lee Hannah is a graduate of both the University of Arizona and The American Institute of Interior Design. Continuing the family business, Kristin became the owner and principal designer of Hannah Interiors in 2001. Her mother Susan Hannah began the business in 1993 and grew the firm to a national level. When Susan passed away unexpectedly in 2001, Kristin took over the business to continue her well-known legacy.

Having visited over 50 countries, Kristin's knowledge of other cultures, styles, and techniques is evident in her unique ability to help others explore innovative ideas and acquire their own unique style. Kristin strives to take design beyond the surface level of what people see by helping her clients discover their individuality and portraying this happiness in their home. Kristin has been featured in numerous national magazines and has recently been featured as the one of HGTV's Top Designers.

In response to a nationwide client base, Kristin has created a new style of design. She has become in many ways a "virtual designer" and uses the Internet extensively in her projects. In addition to Kristin's blog, she is also a frequent guest speaker to our Around the House Forum and enjoys helping our members with their projects.

Brian Waspi

Brian Waspi is the Cofounder of My Dream Home Registry and an active entrepreneur. With a formal education in Environmental Science, he later developed an unusual affinity towards business and began using his diverse background to find unique insights and creative ways of solving problems. His previous pursuits have included licensed environmental consultant, real estate agent and investor, upper level executive, and businesses owner.

Brian strives to seek out commonality and is frequently heard making statements like, "There's got to be a better way to do this". Though he may be guilty of sometimes reinventing the wheel, he never stops exploring and has a hard time pulling himself away from things that "just needs a little fixing". When he made the leap to full-time entrepreneur, it was with the ideal that business and economics are often overlooked as powerful tools for change.
