

# Your solution

is more than a collection of features

While features provide pathways to some benefits, they play only one role in the overall successful execution of an effective solution. **collectiveFleet** provides fleet professionals with the functionality, ease of use and process framework needed to accomplish their tasks.

By providing a simple method of managing and recording the day-to-day tasks required in fleet operation, **collectiveFleet** gives managers a method of directing work flow, and collecting valuable data. This data can play an important role in making both daily and strategic decisions. This marriage of process framework and data flow provides for a more efficient, cost effective operation.

On the shop floor, mechanics will benefit from the task list that give them a coherent view of overdue, current and pending work. The very act of creating, modifying or closing a work order provides data on: mechanic efficiencies, warranty recaptures, cost per meter and equipment histories, inventory usage and a wealth of other information.

#### How we do it

- Work order management
- Work order scheduling / Inventory integration
- Mechanic efficiency tracking
- Recall campaign
- Warranty tracking and recovery

Increased equipment dependability and availability directly benefit operators and the bottom line. By submitting electronic maintenance requests, meter readings, fueling and other data, operators contribute to the pool of data that drives maintenance schedules, alerts maintenance staff to pending problems, provides real world information used to make purchase and disposal decisions as well as help determine proper fleet size and composition.

#### How we do it

- Maintenance requests
- Available GPS integration
- Available remote diagnostics
- Available Motor Pool module

Fuel management is an integral part of any fleet budget and planning. Integrated fuel data gives users a heads up on fuel related maintenance issues, unauthorized fueling, vehicle efficiencies and other key issues that play a role in the overall ability of a fleet to perform its mission.

#### How we do it

- Integrated fuel log
- Collective Data/Wright Express fuel card
- Automatic fuel data import
- On site tank management

Managers will appreciate the wealth of data available, data that's not just "real world" data but "your world" data: real data about their fleet operations: how it is used and how efficiently it operates. Data based decisions regarding internal processes, purchases and staffing can be planned, implemented and evaluated with confidence. The flexibility and scalability of the **collectiveFleet** solution provides relief from the problems associated with migrating to new systems as the size and mission of a fleet evolve. Reporting and data sharing capability make regulatory reporting smooth.

#### How we do it

- Innovative core architecture
- Stock and user defined reports
- Smart filtering
- Advanced security functions
- Scalable and modular
- Available functionality modules
- Server Managed updates
- Total cost of ownership and derivatives

Administrative staff will benefit from the intuitive workflow concepts and multiple data entry methods. Data is easily accessed to meet a variety of internal and regulatory reporting requirements.

#### How we do it

- Automatic and one touch import functions
- Simple, consistent data entry interface
- Built in data integrity and security controls
- Desktop design for easy navigation

Powerful inventory tools lead to precise inventory management. The **collectiveFleet** solution provides instant access, in real time, to information about parts on hand, on order, short and allocated. From ordering to core part tracking and recapture, all inventory data is made available in a variety of reports or as an exportable data file.

#### How we do it

- Short inventory notice for pre scheduled work
- Purchase order management
- User defined reorder point with notification
- Bar coding
- Preferred and alternate part and vendor listing

**"The collectiveFleet solution is a knowledge core: it provides a data sharing process that allows people new to a position to walk in and be productive in very short order"**

The effects of a comprehensive, integrated fleet information management solution resonate throughout an organization. Collective Data is proud to provide solutions to many fine organizations including:

Associated Materials  
Banco Popular de Puerto Rico
