Dynamic Computer Corporation and Guard RFID Solutions Inc. enter into Distribution Agreement

Leading-edge RFID company selects Michigan-based RFID Solutions provider to offer cutting-edge infant and patient protection solutions, asset tracking systems for hospitals. Only RFID system using disposable infant tags for cross-infection prevention.

Vancouver, BC. June 8, 2009 -- Guard RFID Solutions Inc. announced Thursday that it has formed a distribution agreement with Dynamic RFID Solutions of Farmington Hills, Mich. to provide its next generation of Active RFID technology and solutions. Dynamic is making GuardRFID's Infant Protection, Patient Protection and Asset Tracking solutions available to its customers.

The TotGuard Infant Security system uses the only Disposable Infant Tags on the market, eliminating the need to clean, disinfect and sterilize tags after use, and removing the risk of cross-infection between infants. These tags utilize GuardRFID's unique dual-tamper detecting mechanism, which is designed to significantly reduce nuisance alarms.

"Dynamic is dedicated to providing RFID-integrated solutions for hospitals to improve patient care, reduce costs and minimize risks. We have chosen GuardRFID to help us fulfill this mission by offering technology to protect infants – our most vulnerable stakeholders," said Farida Ali, Dynamic President & CEO.

"We have been seeking a scalable, reliable and proven Infant Security system to complete our suite of applications in this market. GuardRFID's TotGuard solution uses cutting-edge and proven technology to deliver many of the attributes that our customers have been asking for," said Ali.

Ali explained that the ability to seamlessly scale out the solution to include other RFID applications as customer needs emerge is a key benefit of GuardRFID's solution, as well as the ability to offer high level diagnostics and maintenance using its fully IP based approach.

"Dynamic is highly experienced in the design and deployment of Active RFID solutions, and is CompTIA RFID+ Certified. We feel privileged to partner with such an experienced systems integrator, knowing that our products will be represented and deployed with the highest standards," stated Zahir Abji, President and CEO of Guard RFID Solutions. "We will build upon this partnership by exploiting the superiority of our technology platform, and Dynamic's systems integration capabilities, to provide the most reliable and best in class solutions that current technology can offer, in healthcare as well as in other markets Dynamic serves."

About Guard RFID Solutions

GuardRFID develops Active Radio Frequency Identification (RFID) technologies and products for Healthcare and Enterprise applications. GuardRFID's products can accurately track and locate assets and people, and are used for enhanced automation, workflow, monitoring and security solutions. GuardRFID's ability to support multiple applications on its platform positions the company to be able to offer combined people and asset solutions all on the same infrastructure. Founded in early 2007, GuardRFID introduced the first low-cost disposable Active RFID tags to the market, eliminating the need to recycle tags, and allowing for mass deployment for a reasonable investment. Guard RFID Solutions is federally incorporated in Canada, with its head office in the Province of British Columbia, and its Sales office in Atlanta, GA.

Additional information regarding GuardRFID products and services can be found on its website www.guardrfid.com.
