Sustainability Resource Planning

ENVIRONMENT ENERGY ASSETS

Governance

Visibility across an organization's sustainability goals, targets and progress has become a necessity due to the financial impact on risk.

Transformation

Because of the financial benefits of increased sustainability and lack of available delivery platforms, organizations will need to change business processes and design entirely new ones focused on this opportunity.

SRPTM Sustainability Resource Planning

Sustainability Resource Planning is a platform approach to cover the core functions of sustainability, which include environmental, energy and asset management. SRP combines multiple business processes and systems into one database to use across the enterprise.

SRP enables you to manage through measurement. You can see how much energy and water you're using at each location. You can also see how much waste and emissions you're producing. Because you can do this in near real time, you can adapt and adjust as needed.

Verisae's Sustainability Resource Planning integrates information about your assets, the energy they use, and their environmental impact. It helps you increase operational efficiency, ensure regulatory compliance and protect your brand.

Technology

Sustainability requires frequent, accurate and granular levels of detail across traditional silos, which enable performance optimization.

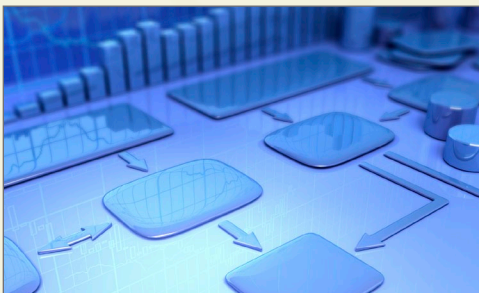

REPORTING TO PERFORMANCE MANAGEMENT

Prompted by regulatory uncertainty, businesses are now coming to the realization that they are not operating as efficiently as they had believed. In an attempt to address the efficiency gap, organizations have resorted to reporting only to recognize what they really want is performance management. SRP goes far beyond reporting to deliver sustainability initiatives through on-demand, automated reduction opportunities.

MARKET CHALLENGES

Do you know the fine for Violating the Clean Air Act is \$37,500 a day -- for each incident and in each location?

Do you know what opportunities across your portfolio will drive the largest ROI?

Do you worry about the public reputation of your sustainability efforts?

Compliance - Are you aware of the latest regulations like the EPA Clean Air Act, EPA emissions reportings and the carbon reduction commitment -- and the ramifications of these on your business?

Operational efficiency - It's nice to know your carbon footprint, but it's imperative to know those assets that contribute the most CO₂, and how reducing your impact can drive savings to your business.

Brand protection - Are you confident in your ability to meet SEC disclosure rules or inquiries about your sustainability efforts? Can you confidently report to the climate registry, the carbon disclosure project or your appropriate reporting authority?

ENVIRONMENTAL MANAGEMENT

Helps our clients enable reduction and manage the emissions, water, waste, and sustainability projects throughout their enterprises.

ENERGY MANAGEMENT

Helps our clients deliver energy reductions and insight through demand management, supply management, efficiency projects and consulting services.

ASSET MANAGEMENT

Ultimately, your consumption of energy and other natural resources occurs through the assets you own -- your buildings, the appliances or equipment inside them, and the transportation vehicles you operate. We help our clients reduce their total cost of ownership of assets from procurement through retirement in a web-based, paperless process.

With SRP software from Verisae, you can start quickly with a low initial investment that enables faster and higher payback. You have no computer hardware to buy and no software to install. The system runs from virtually anywhere using only a web browser.

ABOUT VERISAE

Verisae helps measure, manage and monetize energy costs and carbon emissions. Our proven Sustainability Resource Planning ("SRP") platform improves operational efficiency, makes sustainability initiatives actionable, and reduces energy costs and emissions for distributed enterprises and related energy companies. Verisae delivers a broad range of sustainability solutions to over 40 global clients with a service network of over 7,500 third-party consultants consisting of 60,000 application users. Verisae's integrated sustainability platform actively tracks over 2.1 million assets across more than 23,000 sites.
