PRESS RELEASE

Intel Appoints Peter Katz to its Solution Provider Advisory Council

The President and CTO of PKA Technologies brings knowledge and insight to help direct the Intel® Technology Provider Program

Suffern, NY, August 31, 2010 -- PKA Technologies, Inc. today announced that its President and CTO, Peter Katz, has been appointed to the Intel Solution Provider Advisory Council. During his tenure, Peter will advise Intel on its development of new products, channel program benefits and other concerns of Intel® Technology Provider Program members.

PKA Technologies, an enterprise infrastructure solution provider, develops strong relationships with its partners. "Joining the Intel Solution Provider Advisory Council gives us a real voice in driving the kinds of great new technology solutions our customers need," said Mr. Katz. "And, it helps improve the ability of PKA Technologies to deliver those solutions."

The Intel Solution Provider Advisory Council consists of the top members of the Intel Technology Provider Program. As a council member, Mr. Katz will play a key advisory role in helping Intel develop products that are relevant to resellers' customer needs, and channel program benefits that keep members competitive in the marketplace. The council also provides Intel's channel membership with a consolidated voice heard by Intel senior management.

"Peter brings to this position an extensive record of achievement in the computer industry – experience that makes him a valued member of the Council," said Darrell Black, Intel Director, North America Commercial Channel. "We know that we can produce better products and programs when we listen to industry experts such as Peter. It's our great pleasure and privilege to have him on board, and to collaborate with him in product planning and program development at Intel."

Mr. Katz is a 30-year veteran of the IT industry, with extensive experience in open-systems, storage, and traditional legacy based systems from HP, DEC, Compaq and IBM. He is known for his ability to articulate complex technical concepts into useful business-enabling solutions. He has designed, implemented and managed thousands of IT infrastructure projects that have covered the full IT spectrum of high-end solutions: high performance computing (i.e. clustering, grid), storage management (i.e. archive, SAN, DR/BC), and operating system management (HP-UX, OpenVMS).
