

Webmetrics Basic Monitoring

Be the First to Know When Your Website is Down

Your website is the face of your brand and a source for leads and revenue. Therefore, the end user's experience on your site must be positive. Your customers can't be your first line of defense.

Webmetrics Basic Monitoring offers a view into your external performance, helping you ensure uptime and customer satisfaction. Our Basic Monitoring solutions include simple uptime monitoring (verifying HTTP requests), as well as more powerful affordable solutions, utilizing real browsers, just like your customers use.

Keep a Constant Eye on Performance – from Your Customers' Perspective

Webmetrics Basic Monitoring accesses your site from outside your firewall to make sure it's up and performing. Any time a performance issue is detected, you receive an instant email alert with diagnostic information. You can log in to your account to view further error details, pinpoint the problem, and get it fixed before your customers are impacted. Screenshots of failures are captured to help you debug quickly and easily.

In addition to immediate problem resolution, Webmetrics Basic Monitoring allows you to optimize ongoing performance by providing information on your site trends. Performance charts help you identify looming issues and areas for improvement – fast.

Get a More Accurate View of Performance – with Real Browser Monitoring

Webmetrics Basic Monitoring includes both a simple up/down checker that lets you know if your site is available, and a more robust solution, which uses a real Firefox® browser to access your site from various global locations.

The use of real browsers allows you to check that individual objects are responding, but also to functionally verify that your website is working from end-to-end. This includes ensuring that 3rd party components such as advertisements, gadgets, analytics, and Content Delivery Networks don't adversely affect your website.

Monitor Complex Sites and Applications – with Advanced Selenium Scripting

As part of Webmetrics' advanced real browser support, you have access to a **rich API** based on top of the popular open source browser automation framework Selenium. If you already have **Selenium** tests written, you can easily import them to use for monitoring.

For more advanced behavior, such as monitoring complex **Ajax** applications, you can leverage our **JavaScript**-based programming language to interact with **Adobe® Flash®**, randomize interactions, or read data from a CSV file. No other monitoring service provides such a rich and advanced API.

The Right Solution for Your Site

Our affordable line of Basic Monitoring solutions includes:

- **Basic Monitoring:** utilizes a real browser, provides access to rich APIs, and includes full page breakdowns of page elements
- **Basic Uptime Monitoring:** simply checks HTTP requests to let you know if your URL is up or down

Interested in testing us out? A **limited free service** is also available.
