TRANSPORT	NO	17x40 in.	6.6 lbs.
TRANSPORT - W	YES	17x40 in.	10.6 lbs.

Dominator Shield

Offers the largest area of protection of any of the DeadStop™ line. 48" in height, it provides protection for a tactical squad in a live fire scenario. At just over 14 pounds with a full viewport, protection is provided with ease of mobility and movement.

- Curved front surface provides protection in tangential attack situations
- Custom ambidextrous handle allows for ease of deployment and comfort in use
- Curved viewport provides multi-hit performance and superior down range vision
- Optional light source for field of fire illumination or Take-Down lighting capability

Regulator Shield

Intermediate sized protection shield. Offers full upper body protection while on the move, and full body protection in the crouched or kneeling position. Smaller size offers the same protection at a much lighter weight for ease of use and mobility.

- Curved front surface provides protection in tangential attack situations
- Custom ambidextrous handle allows for ease of deployment and comfort in use
- Curved viewport provides multi-hit performance and superior down range vision
- Optional light source for field of fire illumination or Take-Down lighting capability

Enforcer Shield

The smallest and most versatile shield in the line. Designed to offer vital area protection while on the move. At just over 10 lbs with a viewport, the Enforcer allows the user the maximum freedom of movement and protection without the fatigue of a heavier shield.

- Curved front surface provides protection in tangential attack situations
- Custom ambidextrous handle allows for ease of deployment and comfort in use
- Curved viewport provides multi-hit performance and superior down range vision
- Optional light source for field of fire illumination or Take-Down lighting capability

Transport Shield

The Transport Shield is specifically designed for tactical teams in restricted space scenarios such as airline, bus, train or other mass transit vehicles where limited aisle space restricts use of full body shields. The size and shape of the shield allows the team to advance through the seating area by creating a protective area across the entire aisle during the breach. Optional viewport allows excellent line of sight while advancing.

- Shield design allows ease of movement in restricted space in aircraft or bus scenarios.
- Custom ambidextrous handle allows for ease of deployment and comfort in use
- Curved viewport provides multi-hit performance and superior down range vision
- Optional light source for field of fire illumination or Take-Down lighting capability
