

Software Screenshots

Maintenance Connection users quickly get used to the easy flow and simple, tab-based, split-screen user interface uniquely displayed in the CMMS software. The most common feedback customers provide is how quickly their staff is able to learn the Windows-friendly screens and system navigation. Of course, it's like anything, it takes some time to master—but the learning curve with Maintenance Connection is reduced by the time and effort put into making a system that is usable by all levels of computer user.

Use the **Asset Hierarchy** to organize equipment and infrastructure into an easy-to-navigate system. Store details about each asset for easy access and reporting.

Manage open **Work Order** in list form, or use the Labor **Calendar** to schedule, plan, and adjust time for shops or individual maintenance staff.

Management will love the exquisite **Reporting** engine built into Maintenance Connection, which also includes a customizable **KPI Dashboard** for at-a-glance insights.
