

No Limits Software takes data center management to a new level with its Rack Management Platform (RaMP™)

Automated Asset Management

- ✓ 100% data accuracy through the automated discovery of detailed device information
- ✓ Automatically track device location down to the rack unit (including zero-U devices)
- ✓ Real-time data center auditing for IT asset accounting compliance (Sarbanes-Oxley, CFR-11)
- ✓ Automated change control to reduce mean time to repair and increase availability
- ✓ Published web services API provides full interaction with other asset and change management systems

Real-Time Monitoring

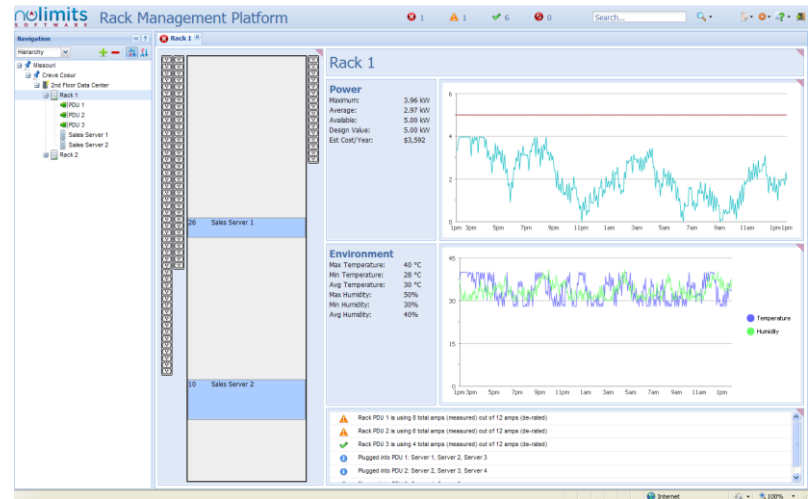

- ✓ Power and environmental monitoring down to the device level
- ✓ Server monitoring to identify servers which should be retired or consolidated
- ✓ Identify servers which are not using server power management
- ✓ Real-time redundancy evaluation to reduce shutdown risk due to rack PDU overload on failover

Enhanced Capacity Planning

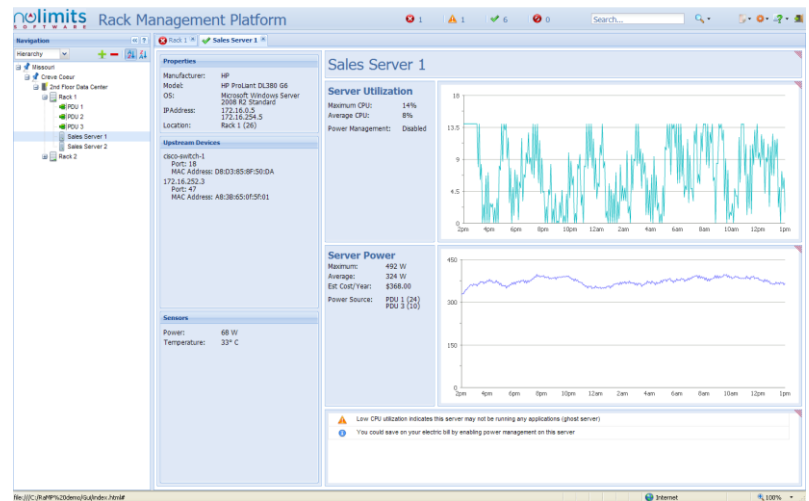

- ✓ More accurate capacity planning data helps to reduce stranded power and shutdown risks

User Interface Options

- ✓ Actionable data at your fingertips through fully interactive dashboards
- ✓ Blackberry, iPad, iPhone and Droid handheld applications put the data into your hands
- ✓ Enhanced reporting package provides ability to create customized reports using Microsoft Word
