

**Your Hotel Can Save Over 40%
in Energy Costs Per Year!**

Wi-Fi SmartBuilding

A Fully Managed Wi-Fi Network is MORE than just Internet...

- Hotel-Wide Wi-Fi Access for all Wi-Fi enabled devices
- Energy Management & Control (including heating, cooling & lighting)
- Security Services (including video monitoring & aperture detection devices)
- 24/7 Monitoring & Support
- Customized Solution Analysis for Energy Savings
- Earn LEED Points for Your Hotel!

How Can My Hotel Save?

Advanced temperature controls and dimming lights in unused rooms throughout your hotel will result in large energy savings. When your guests check out of their rooms, lights can be automatically turned off and the temperature adjusted to a predetermined setting. Rooms not always in use, such as conference rooms, can be kept at energy efficient levels to save even more on utilities! Hotel occupancy, housekeeping efficiency, energy settings and more can be monitored by GuestWiFi, 24x7... all you do is **sit back and enjoy the savings!**

Why Choose GuestWiFi?

“Thanks to GuestWiFi’s 24x7 management of our wireless network, **we are able to focus on the needs of our hotel guests**, instead of having to deal with Internet service support and maintenance.”

*-Allan Buczak GM
Holiday Inn, Fort Lee, NJ*
