D3 Security Provides ‘Game-Changing’ Vertical Applications for Incident Management Systems

Company’s incident reporting systems are completely customizable for companies in a wide range of industries, providing for a true turnkey solution

VANCOUVER, BC – D3 Security Management Systems, Inc., a developer of [security management software](#), has announced that its industry-leading product is now available pre-configured for a variety of different industries.

Unlike other [incident management software](#) systems, D3 Security provides customized turnkey solutions for organizations in industries such as [healthcare](#), [energy](#), [utilities](#), [financial services](#), [transportation](#), and [higher education](#), with more industry verticals slated for release that include corporate property management, technology and entertainment. Organizations are now able to leverage D3 Security's vertical applications, which incorporate the company's wealth of experience and expertise through out-of-the-box preconfigured forms, tasks and related reports.

“When it comes to incident reporting, the turnkey industry [vertical applications](#) implemented by D3 Security are truly a game-changer,” said Gordon Benoit, president. “Our company continues to be a leader in functionality and configurability for incident reporting systems, with solutions that offer unparalleled information access control, reporting features and scalability.”

D3 Security's vertical applications offer a prebuilt data model, providing a shortcut and faster time to value than consumers can get with building solutions from scratch. By incorporating the expertise and best practice capabilities of industry professionals, D3's applications include predefined incident report forms, tasks, dashboards, metrics, workflows and reports on various aspects of security, safety and compliance specific to each industry. This means that organizations can be sure that they are always gathering the appropriate information, right from the start.

The apps also offer guided analytics that help managers spot incident trends and leveraging D3's industry-leading customization features, each system can be easily configured to meet the exact requirements of each users.

“Because our security systems are customizable by the end-user, it’s easy for them to future-proof their applications for any changing requirements that may come up as time goes on,” Benoit said.
